

THE DEFINITIVE DEVELOPER CONFERENCE

Agile software architecture sketches

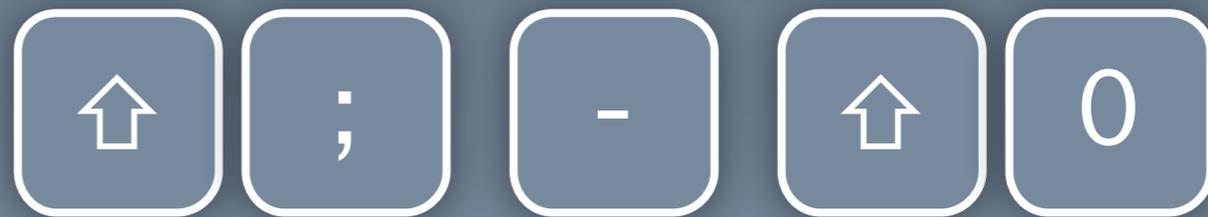

Simon Brown

I help software teams understand
software architecture,
technical leadership and
the balance with agility

I code too

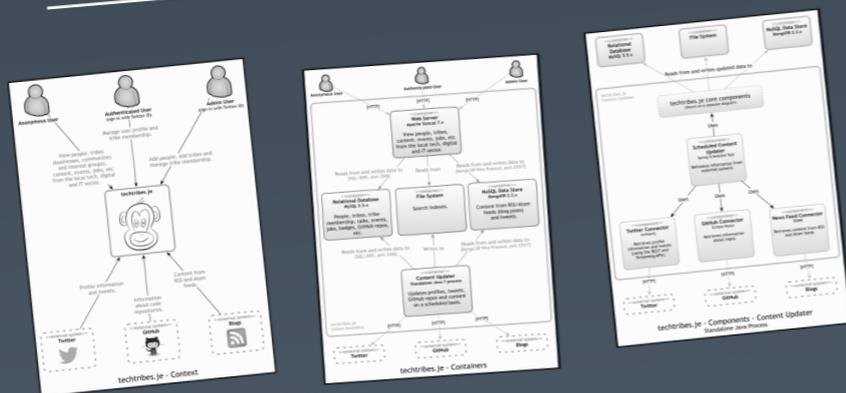

Software architecture
needs to be more

accessible

coding
(the)
architecture

Software Architecture for *Developers*

Technical leadership by **coding**, coaching,
collaboration, *architecture sketching*
and just enough up front design

Simon Brown

A developer-friendly
guide to software
architecture,
technical leadership
and the balance
with agility

Leanpub

10 out of 10
“Highly recommended reading”

Junilu Lacar, JavaRanch

<http://leanpub.com/software-architecture-for-developers>

What is architecture?

As a noun...

Structure

The definition of something in terms
of its components and interactions

As a verb...

Vision

The process of architecting,
making (significant) design decisions, etc
based upon goals and requirements

Enterprise Architecture

Structure and strategy across people, process and technology

System Architecture

High-level structure of a software system (software and infrastructure components/services)

Application Architecture

The internal structure of an application (classes, components, design patterns)

```
/// <summary>
/// Represents the behaviour behind the ...
/// </summary>
public class SomeWizard : AbstractWizard
{
    private DomainObject _object;
    private WizardPage _page;
    private WizardController _controller;

    public SomeWizard()
    {
    }

    ...
}
```

*Software
architecture*

What is design?

Architecture represents the
significant decisions,
where significance is measured
by **cost of change**.

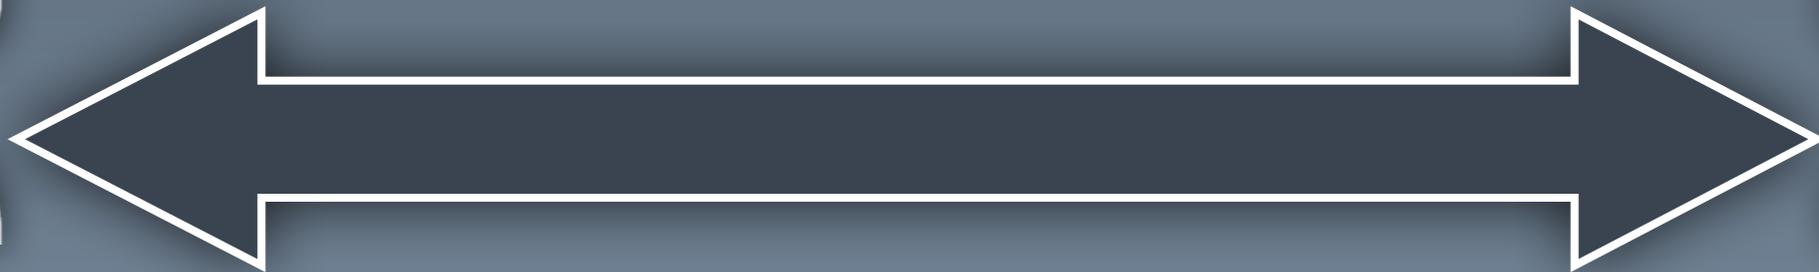

Grady Booch

<http://www.handbookofsoftwarearchitecture.com/index.jsp?page=Blog&part=2006>

Design a software solution for
the financial risk system

The deliverable is one or more
large diagrams on flip chart paper
to describe your solution

Questions

- Will we receive all of the trade data each day?
- What sort of interface do the TDS and RDS have; how do we get the data?
- What are the "calculations"?
- Does the bank have technology X?
- Can we use technology Y?
- ...

What's been **challenging**
about the exercise so far?

Challenging?

Level of detail

↳ where to stop

Who is the audience - different backgrounds

Implementation

- easy to get bogged down in detail

Type of diagrams

Notation

Documenting assumptions

⑦ Challenging

Needed to ask questions / make assumptions

Temptation to focus on detail

↳ when do we stop?

How much detail?

Talked about more than the diagrams

What notation? - boxes
- arrows

⑩ Challenging?

Verifying our own assumptions

Expressing the solution

- communicating it in a clear way

- use of notation

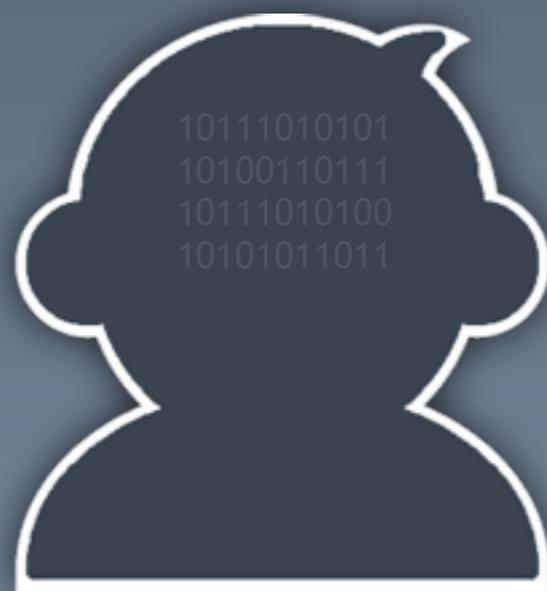

- easy to mix levels of abstraction

- how much detail?

What's been challenging about the exercise?

People expect to present their designs and therefore

**information is still
stuck in their heads**

Review the diagrams

*3 things we like
about the diagrams*

*3 things we think would
improve the diagrams*

(focus on the communication of the solution
rather than the solution itself)

What does
colour
mean?

NO ANNOTATION
ON FLOWS

SHOULD USE
MORE
COLORS

Post Its
CAN FALL
OFF

Objects vs
actions

MIXES
DIFFERENT
LEVELS OF
DETAIL

NOT SURE OF
TRANSITION
BETWEEN
DIFFERENT
DIAGRAMS -

CONFLICTING
LEVELS OF
DETAIL IN
PRESENTATION

~~Meaning of different arrows~~
What about
the different
arrows?

What
shapes
mean

WHY ARE
SOME
LINES
PINK?
what are the pink lines?
- represent (delete/control)
- no clear system boundary!

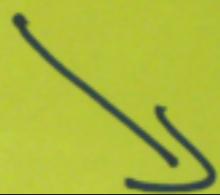

WHAT DO
THE SHAPE
MEAN?

UML IS GOOD,
BUT NOT
EVERYONE KNOWS
IT

WHAT DO
LINES RE-
PRESENT?
(DATA? CONTROL
DEP.?)

What's the
DB-like
icon?

Not sure 😞
what this
IS

DIFFERENT
LEVELS IN
SAME
DIAGRAM

ARE THE
ARROWS THE
RIGHT WAY
ROUND?

Who here uses **UML**

on a **regular basis?**

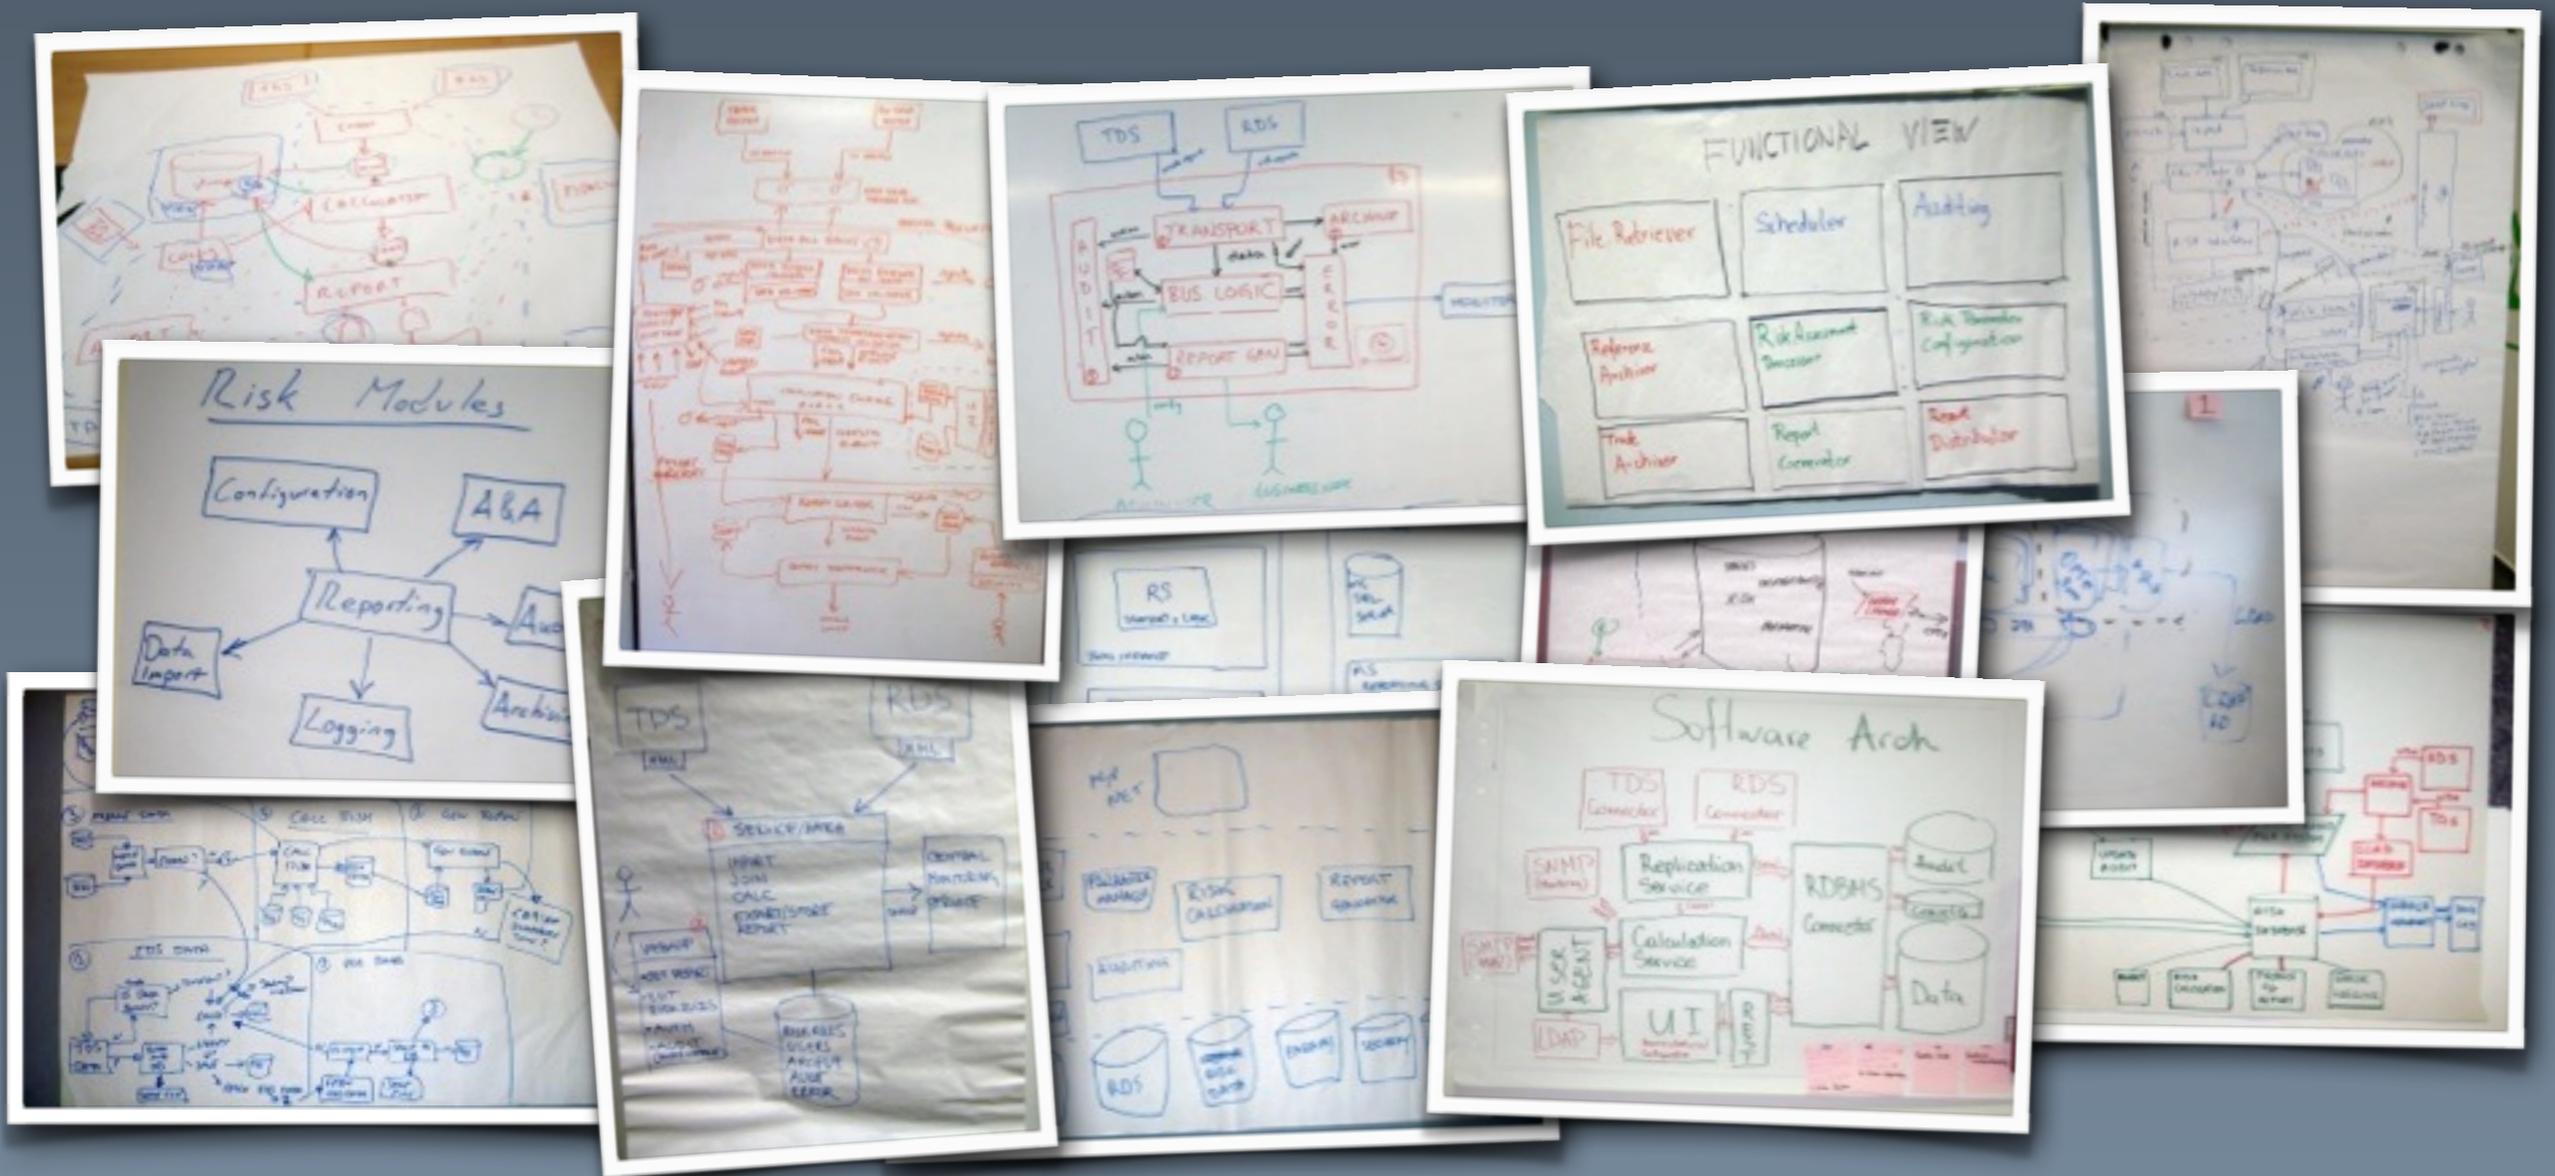

9 out of 10 people
don't use UMI

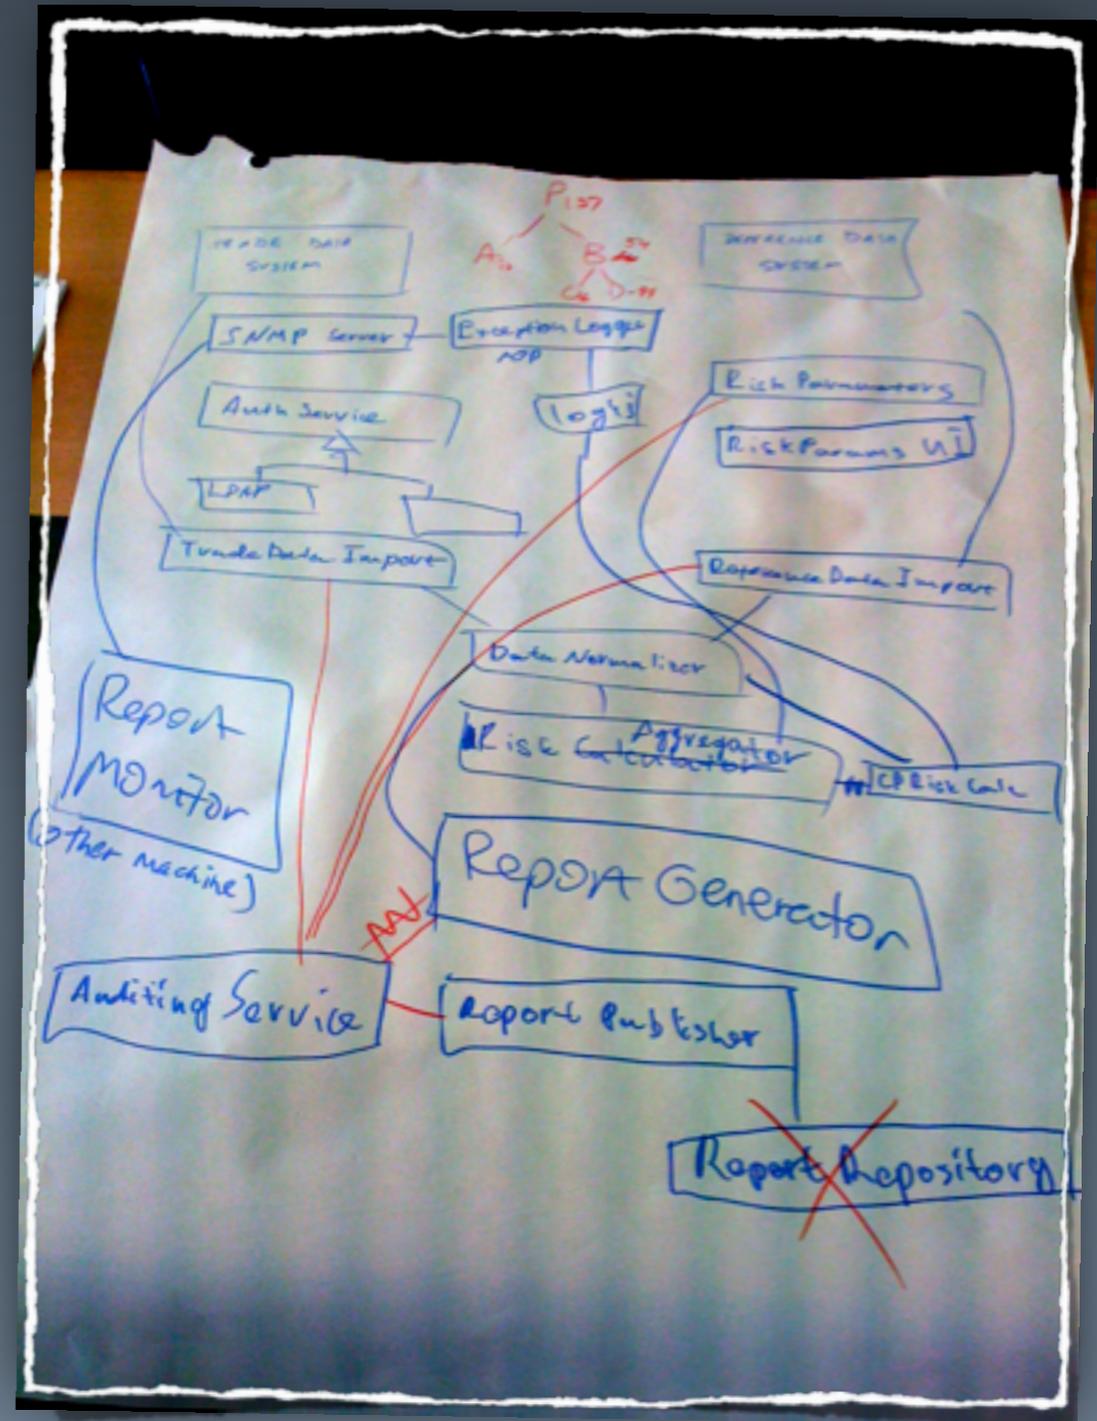

(in my experience)

NOUML

diagrams?

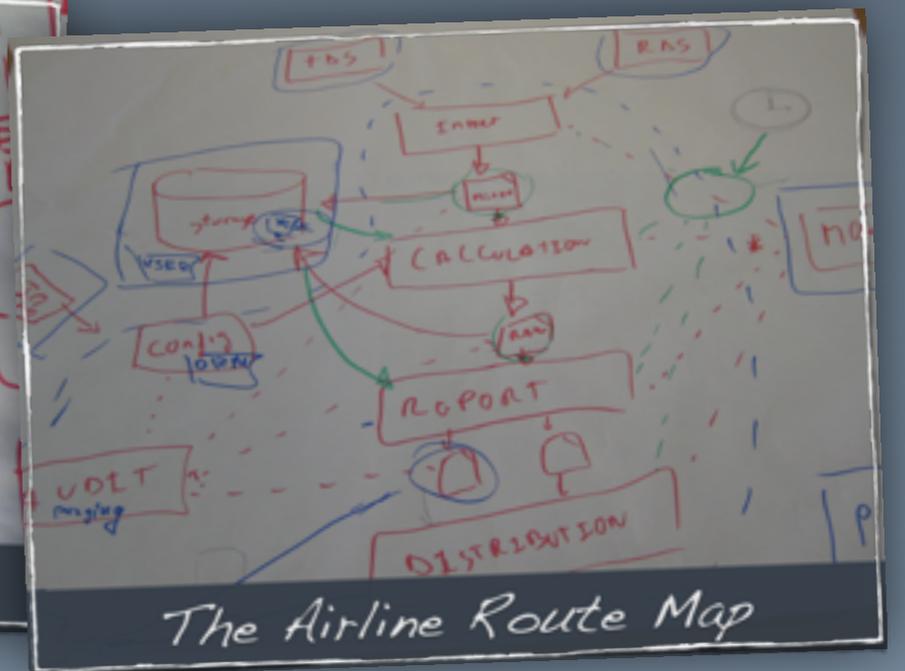

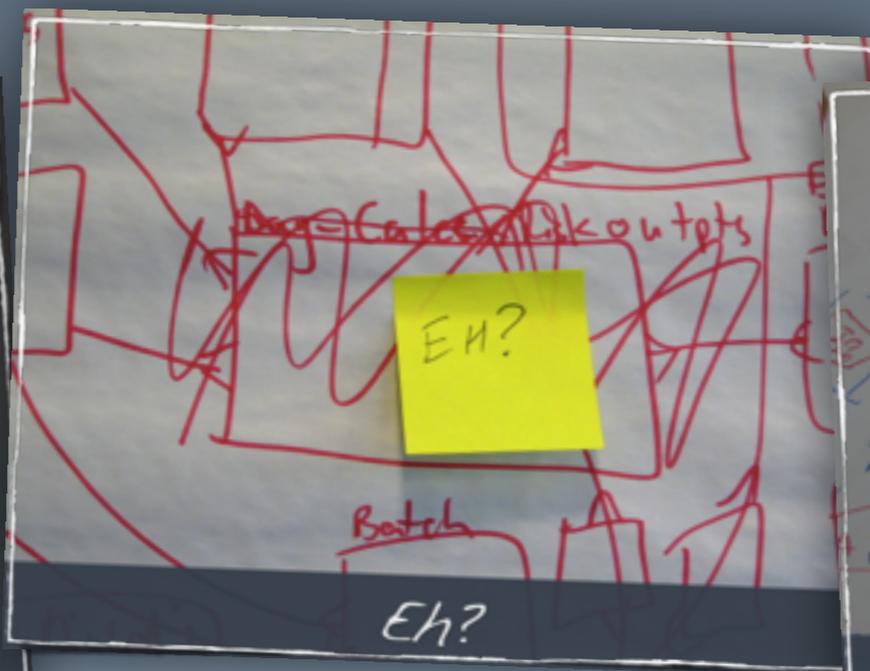

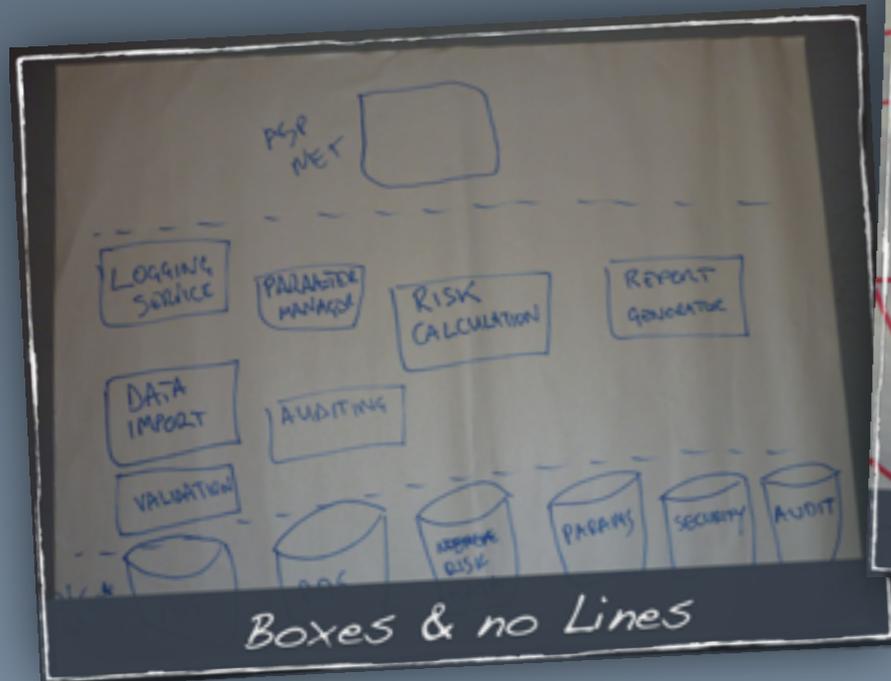

In my experience,
software teams
aren't able to
effectively
visualise the
software
architecture
of their systems

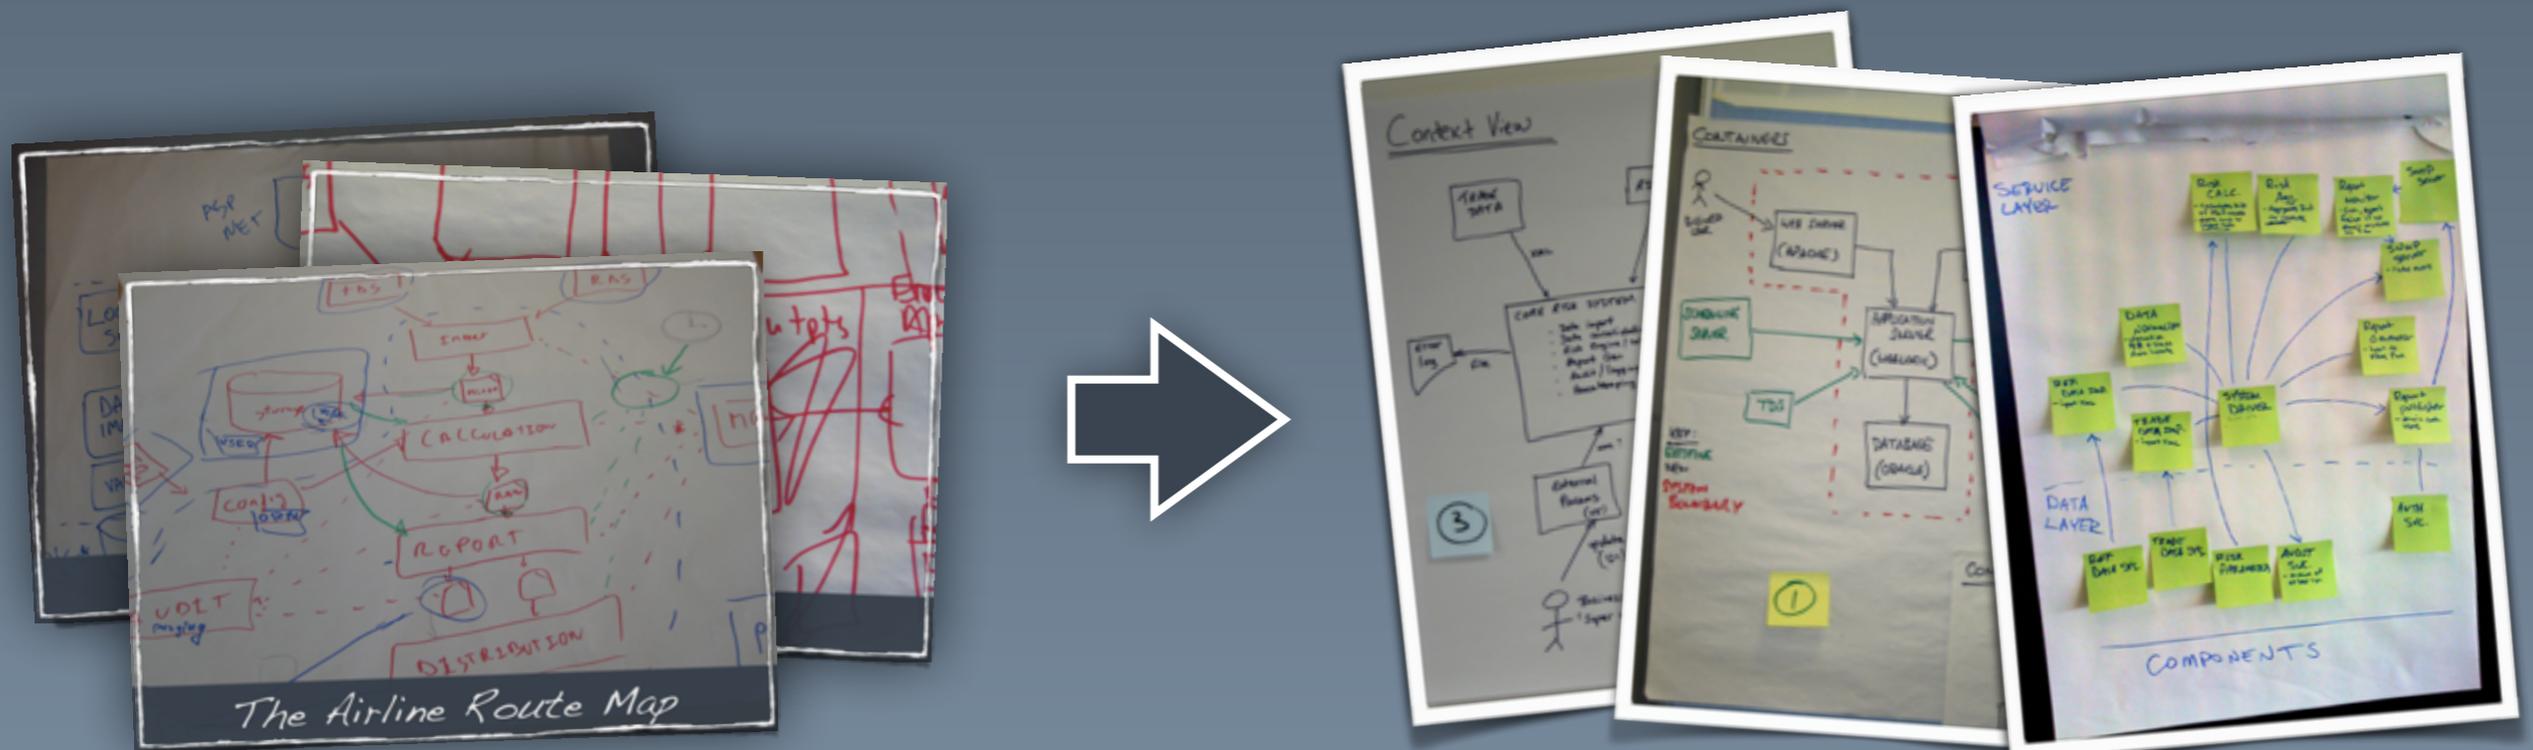

We can visualise our process...

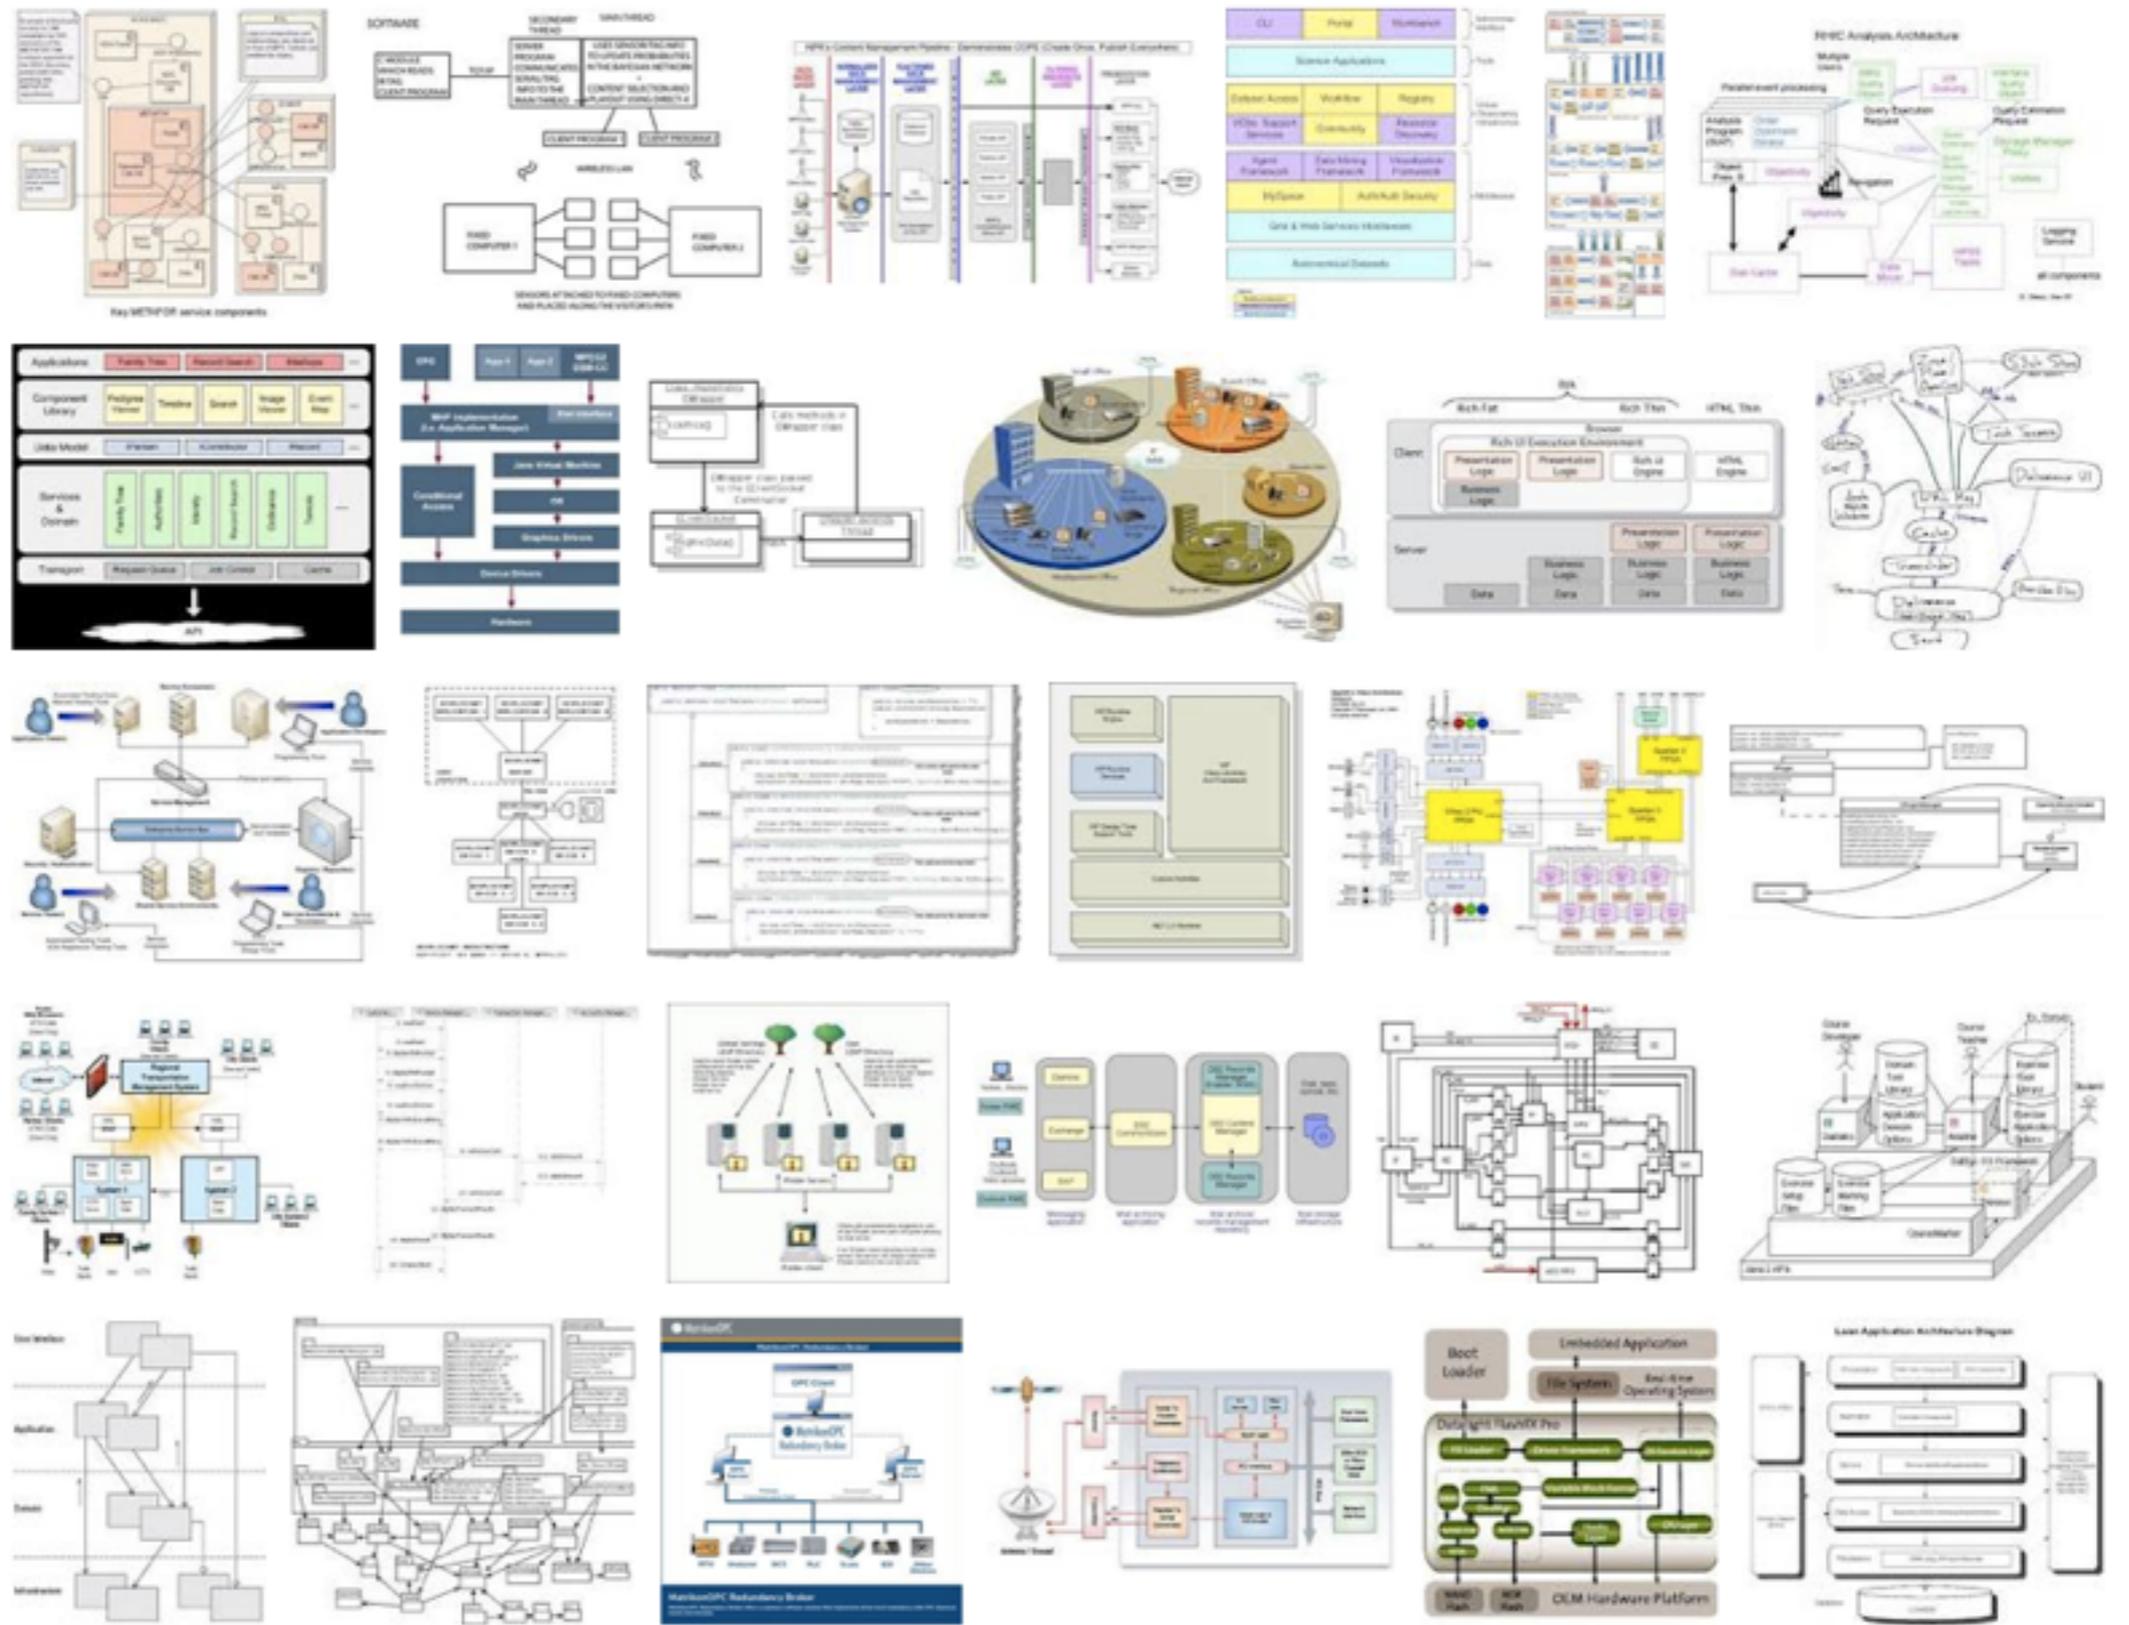

...but not our software!

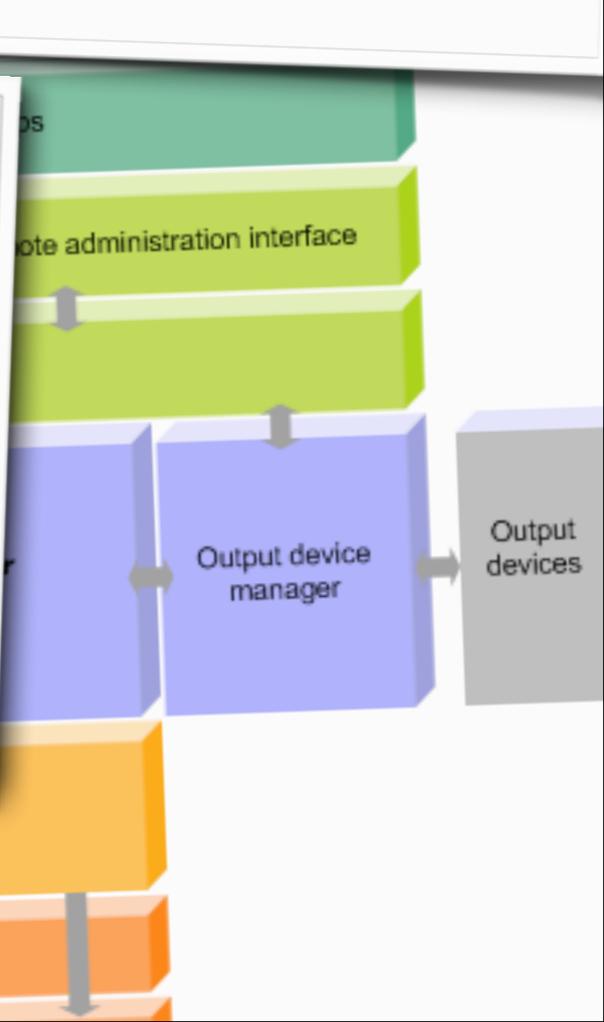

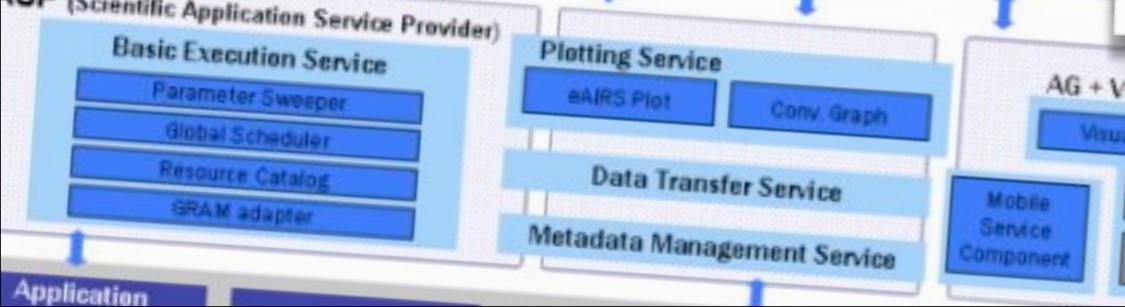

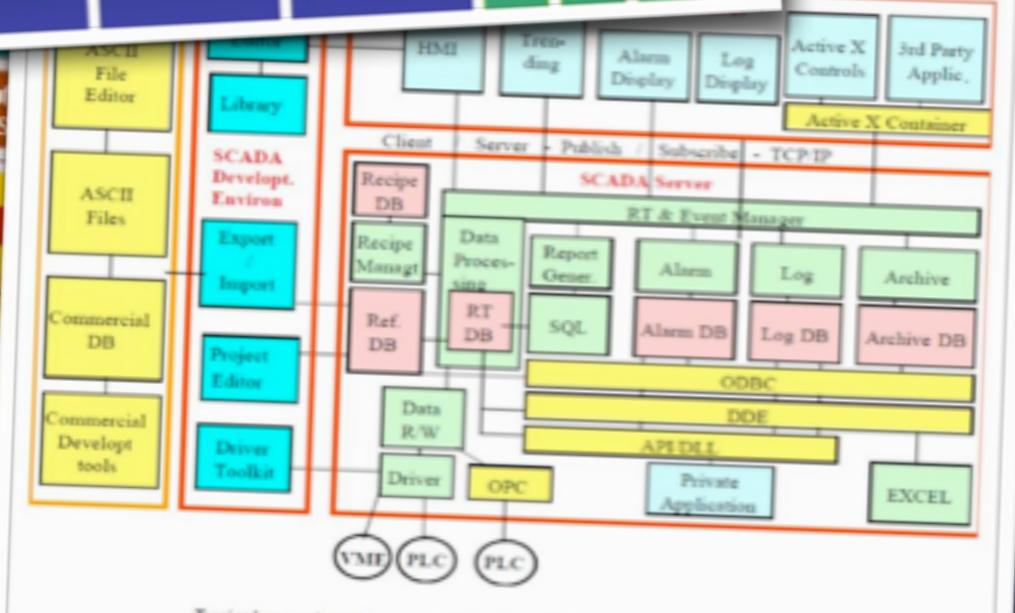

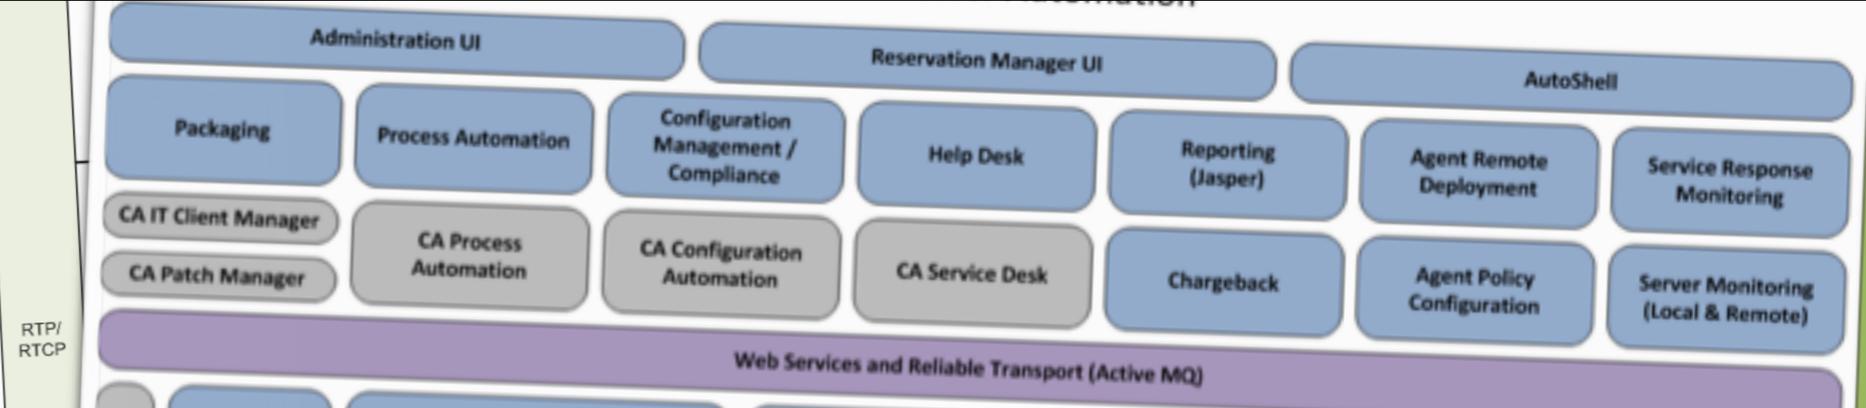

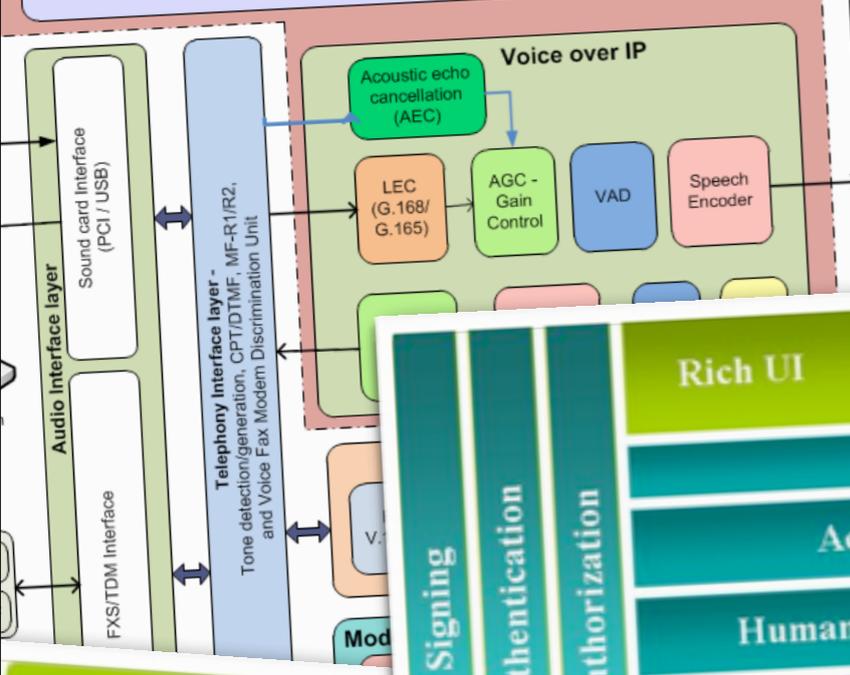

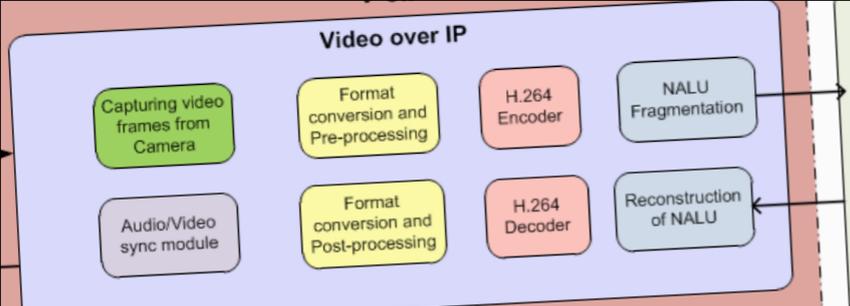

Moving fast (agility) requires
good
communication

Page 7

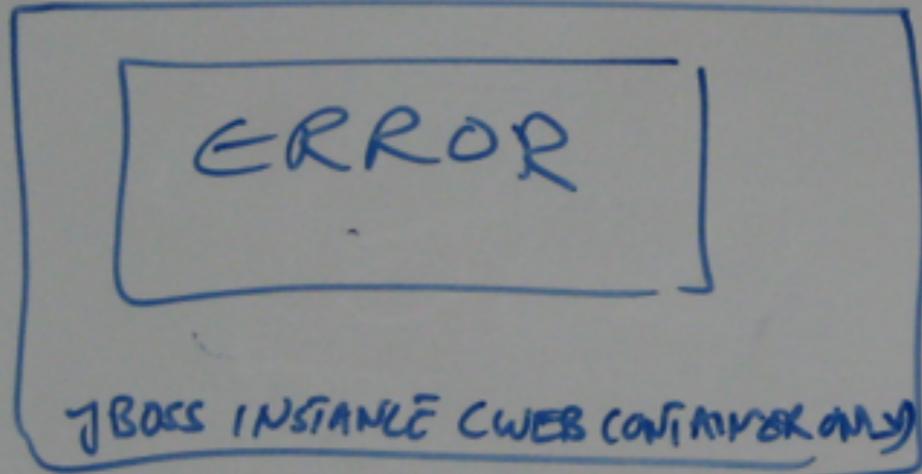

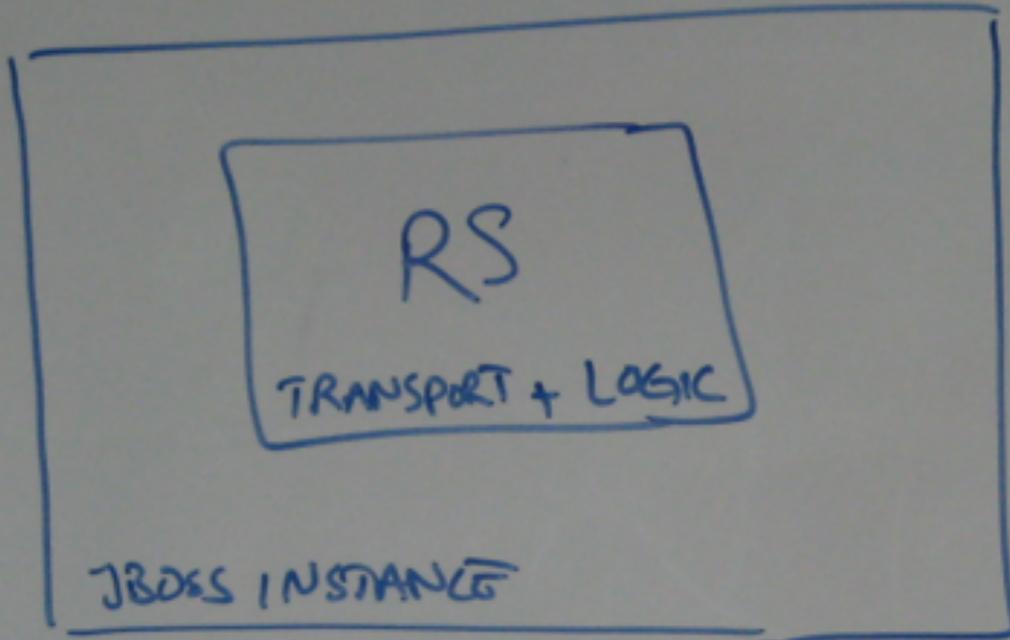

Are these

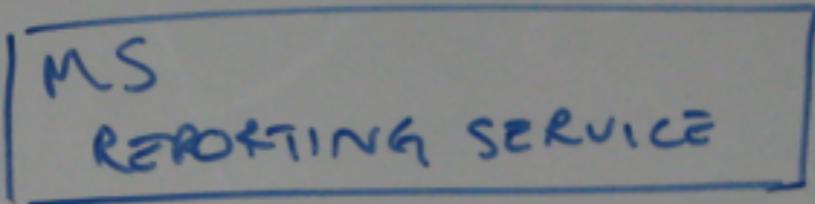

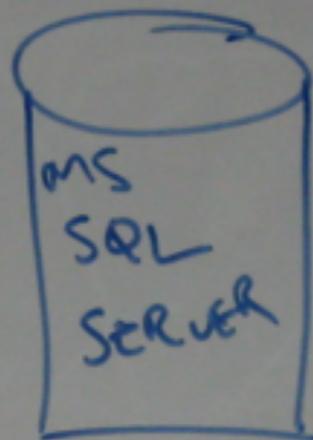

effective

sketches?

- RAID
- writable only for process owner

Missing Details

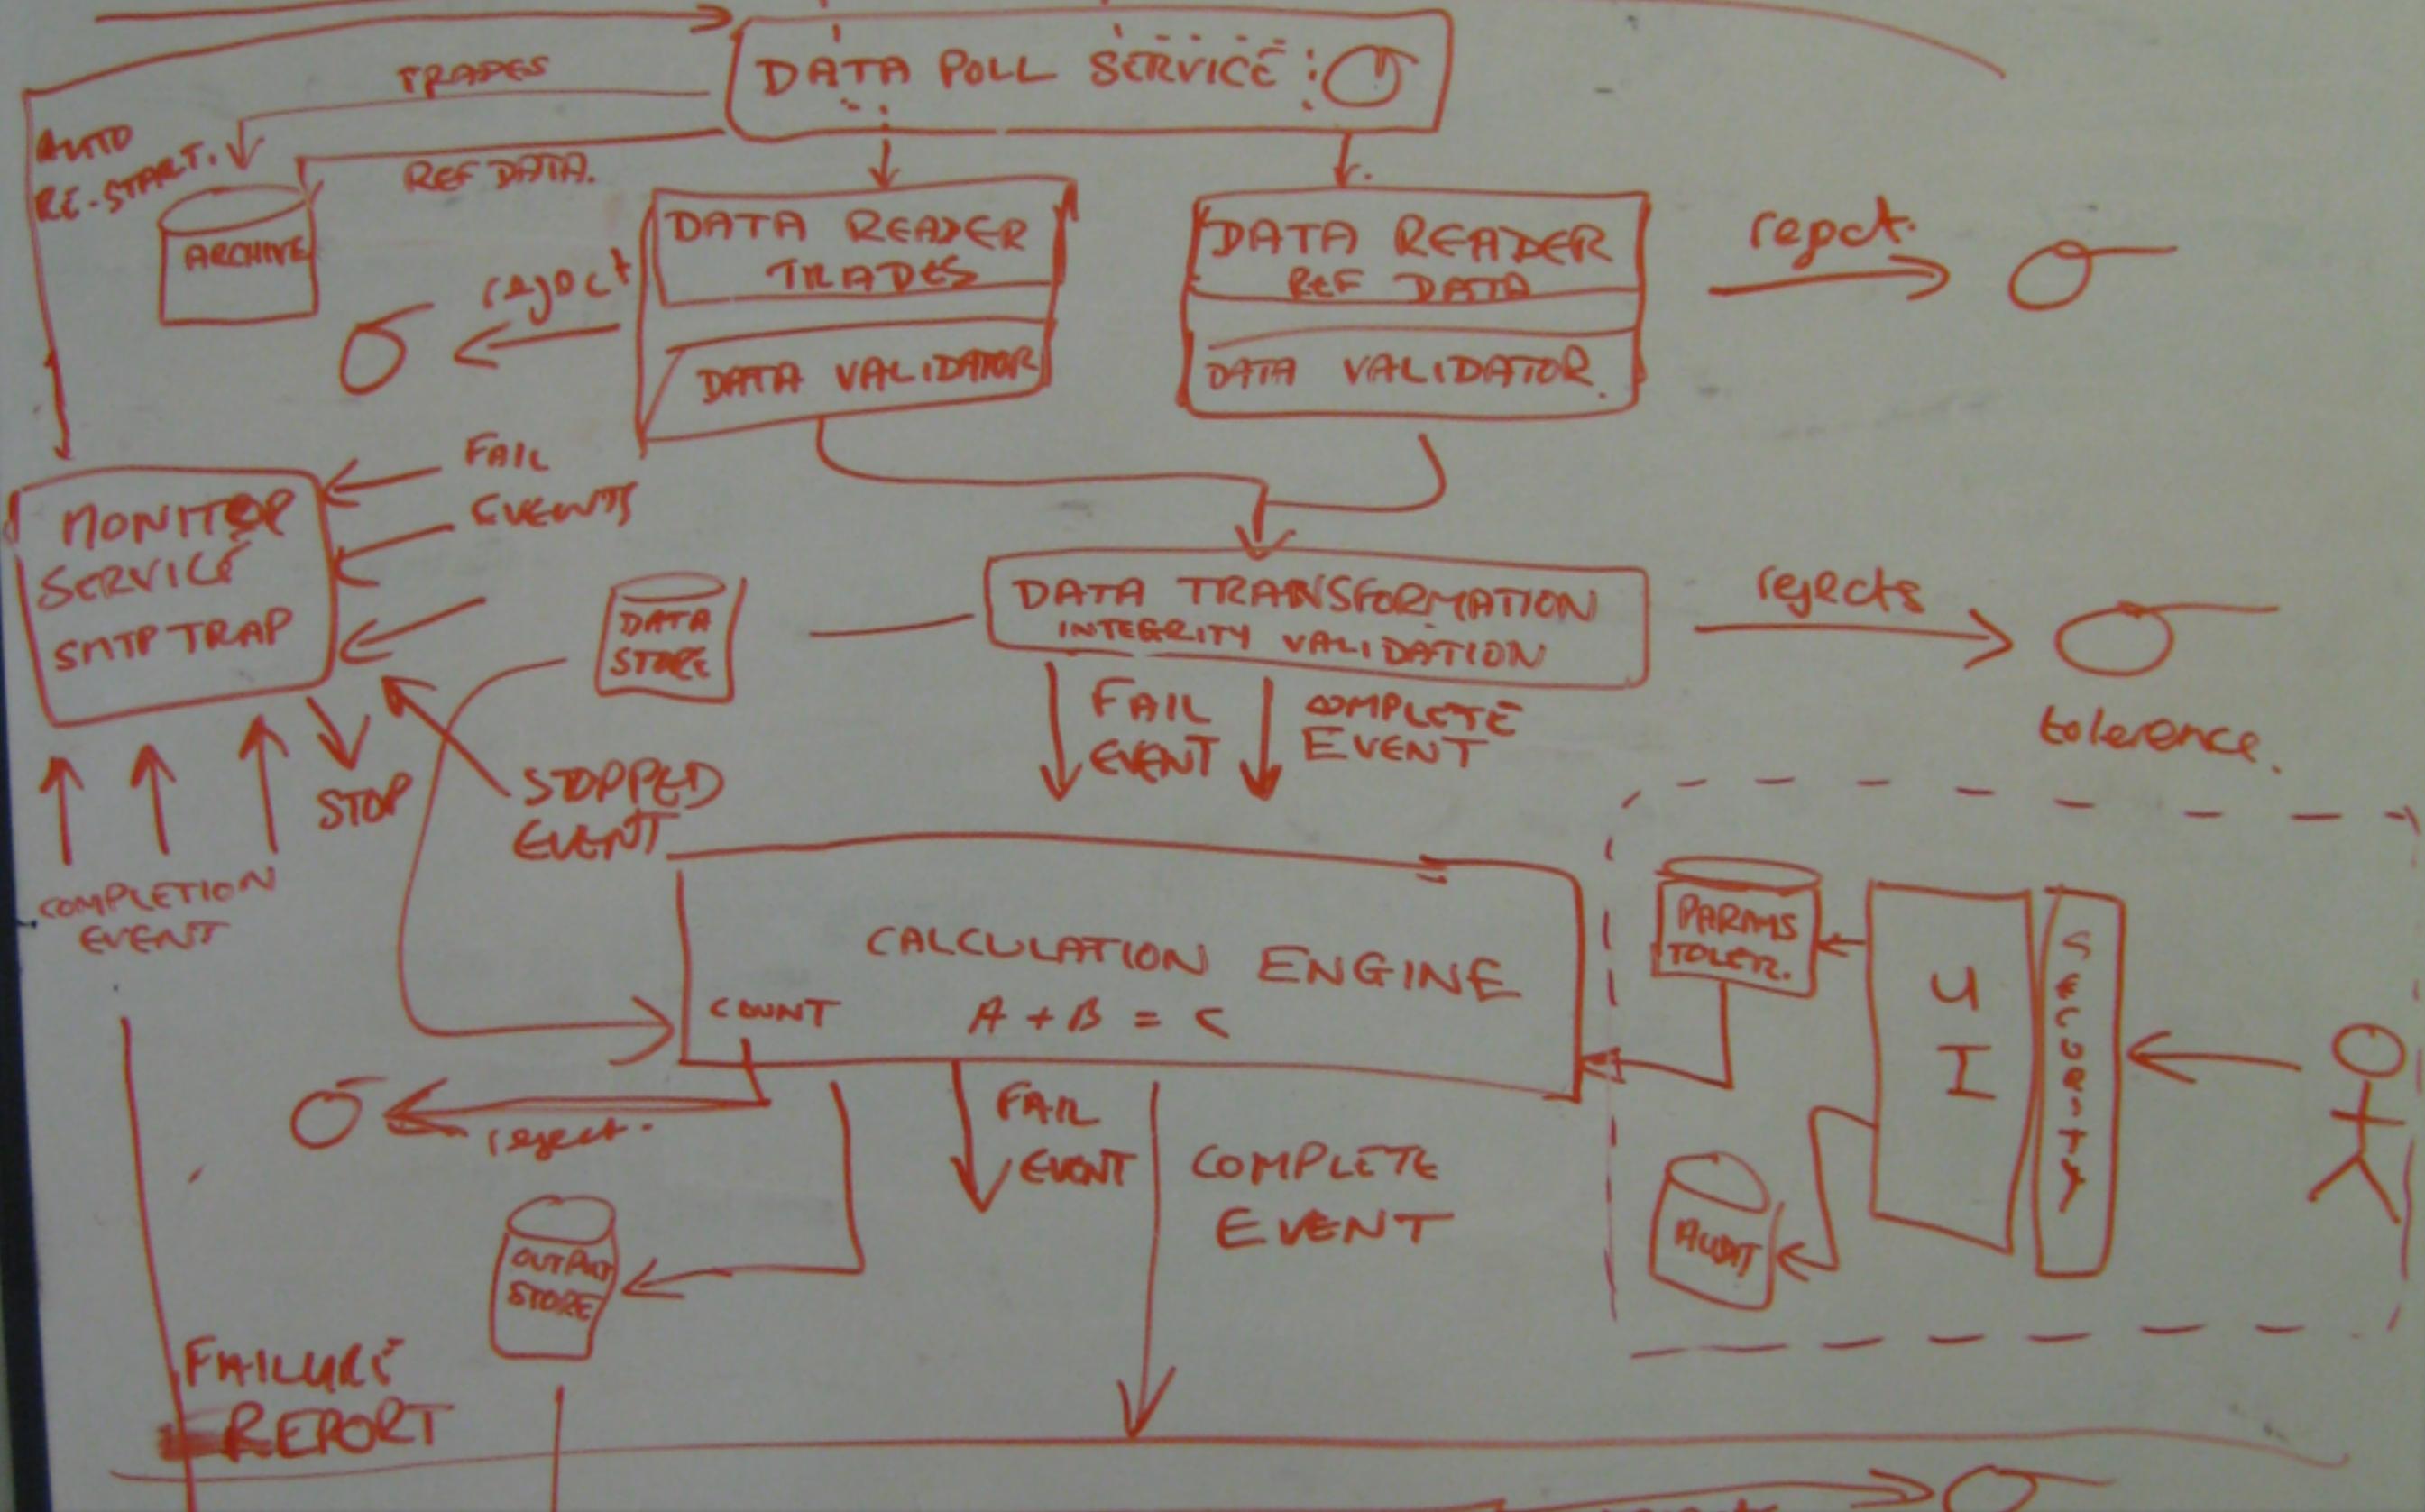

Assumptions are the mother of all ...

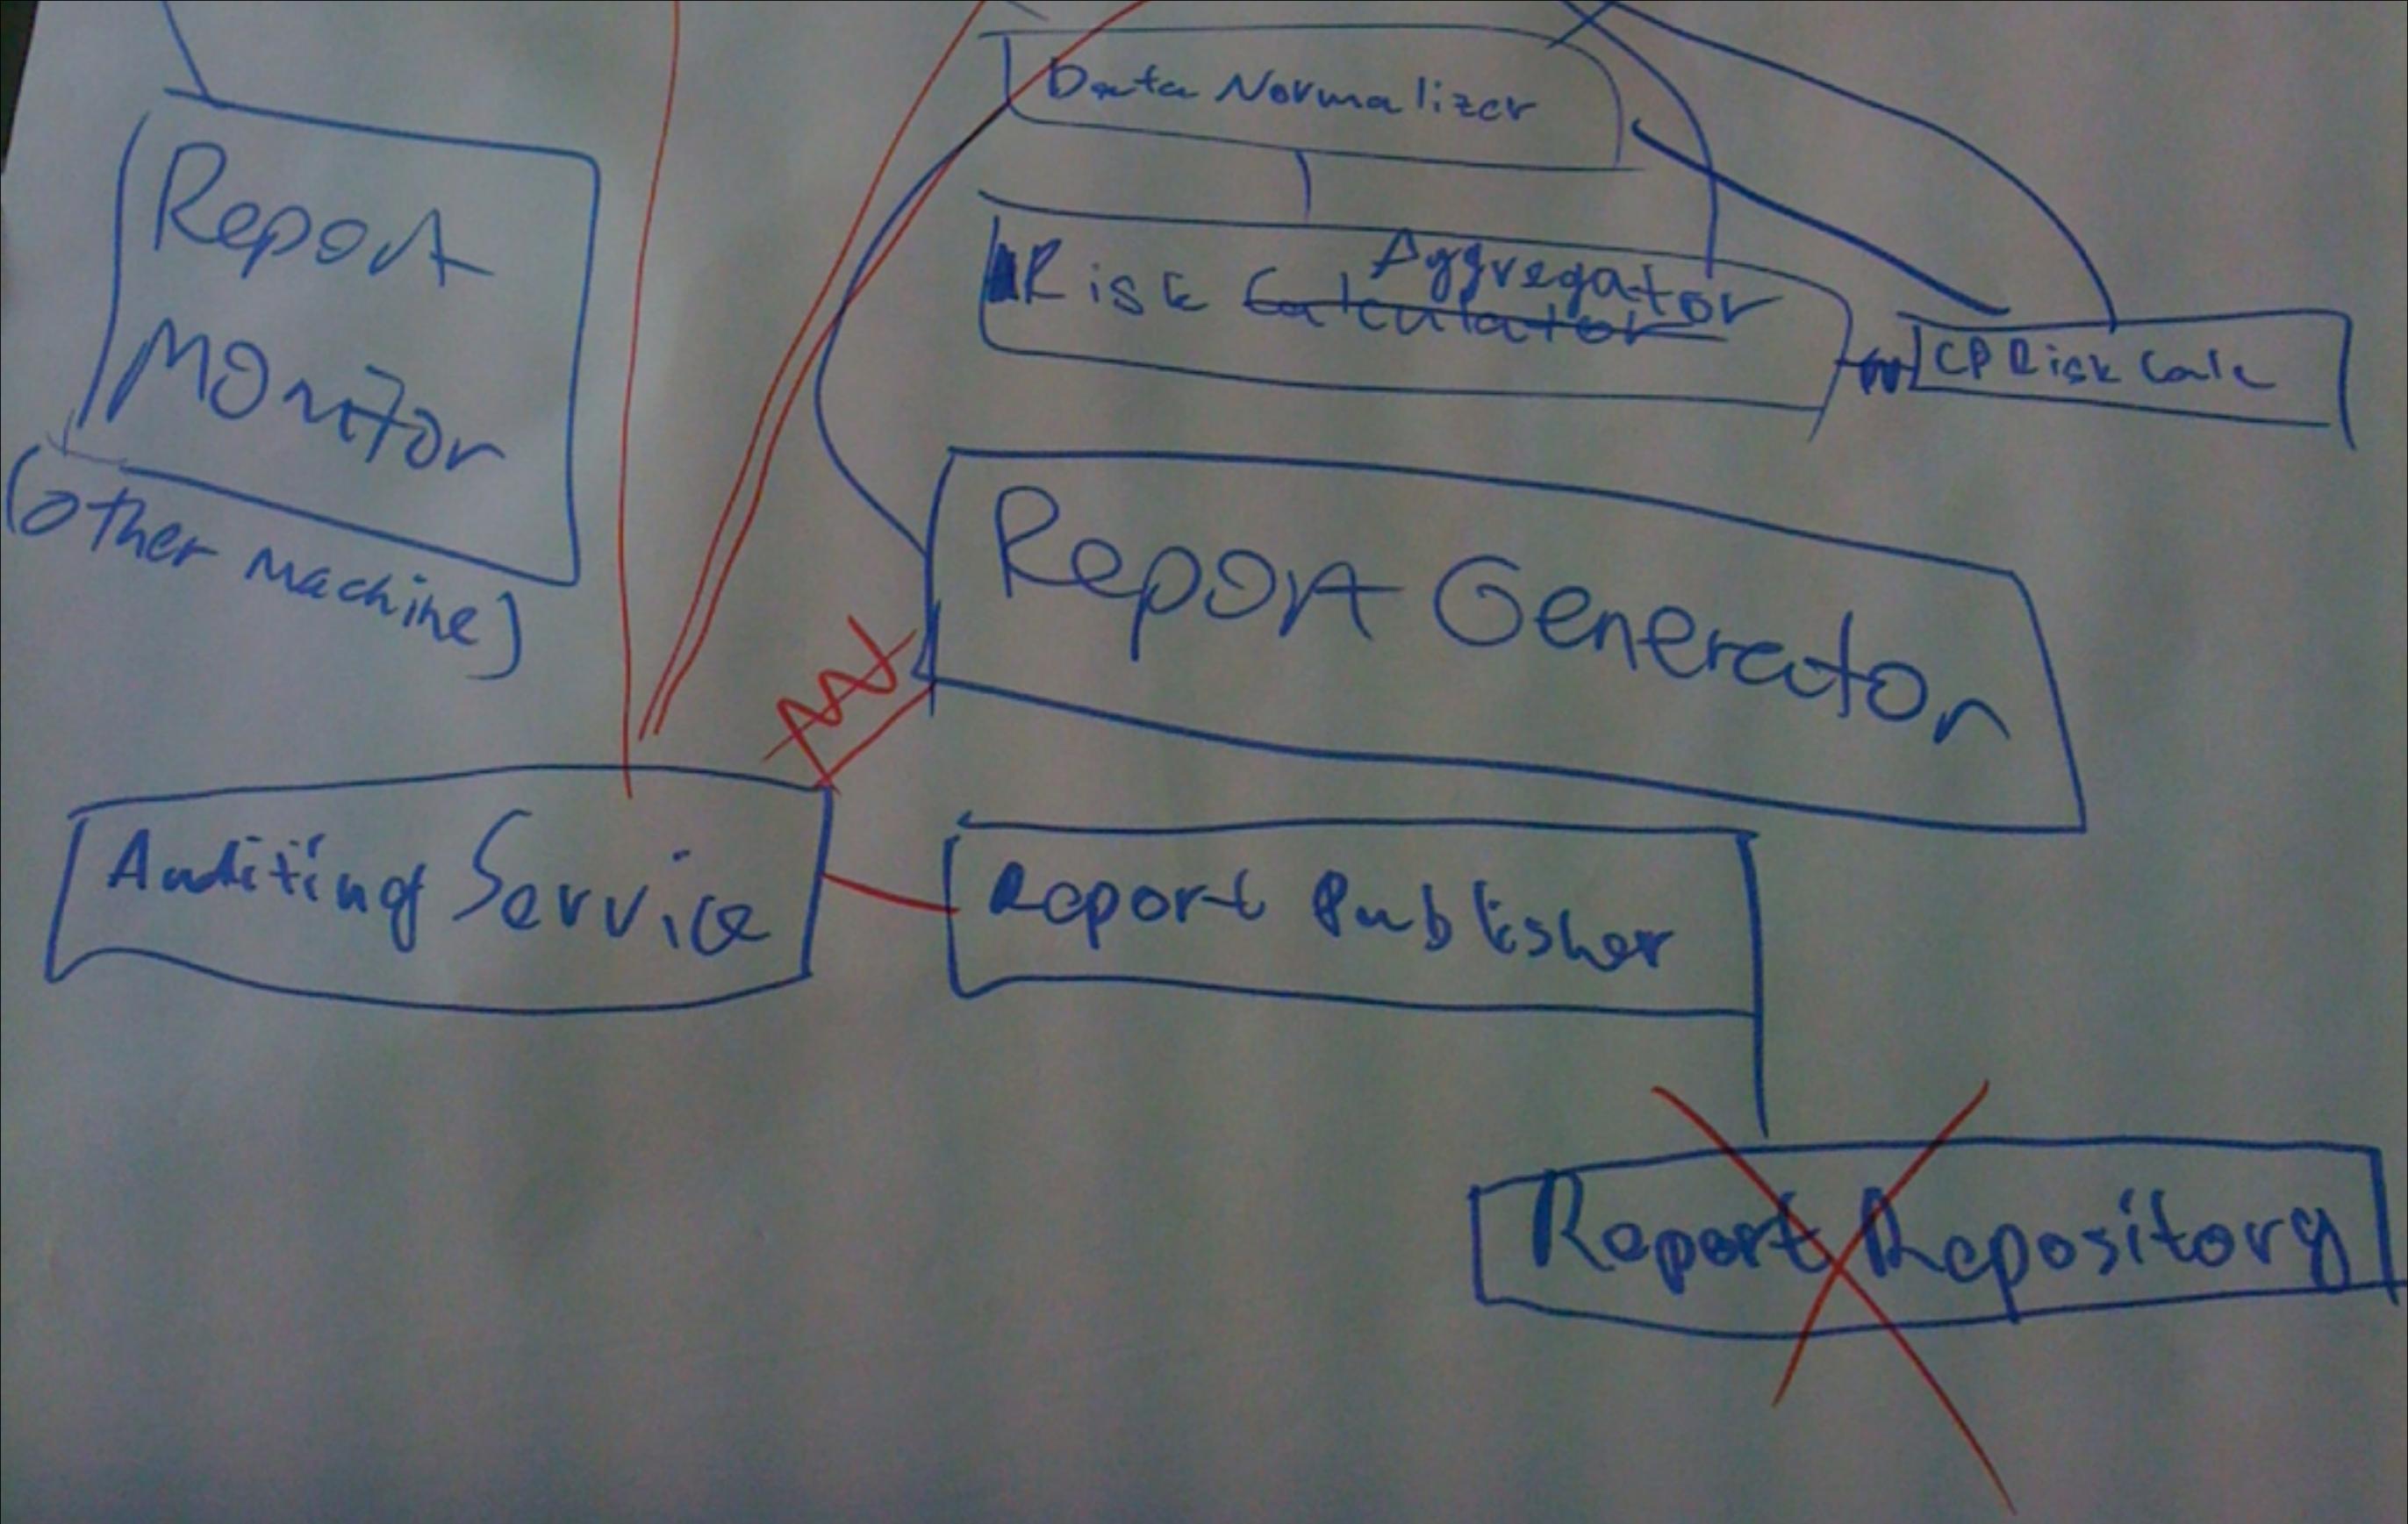

Homeless Old C# Object (HOCO)

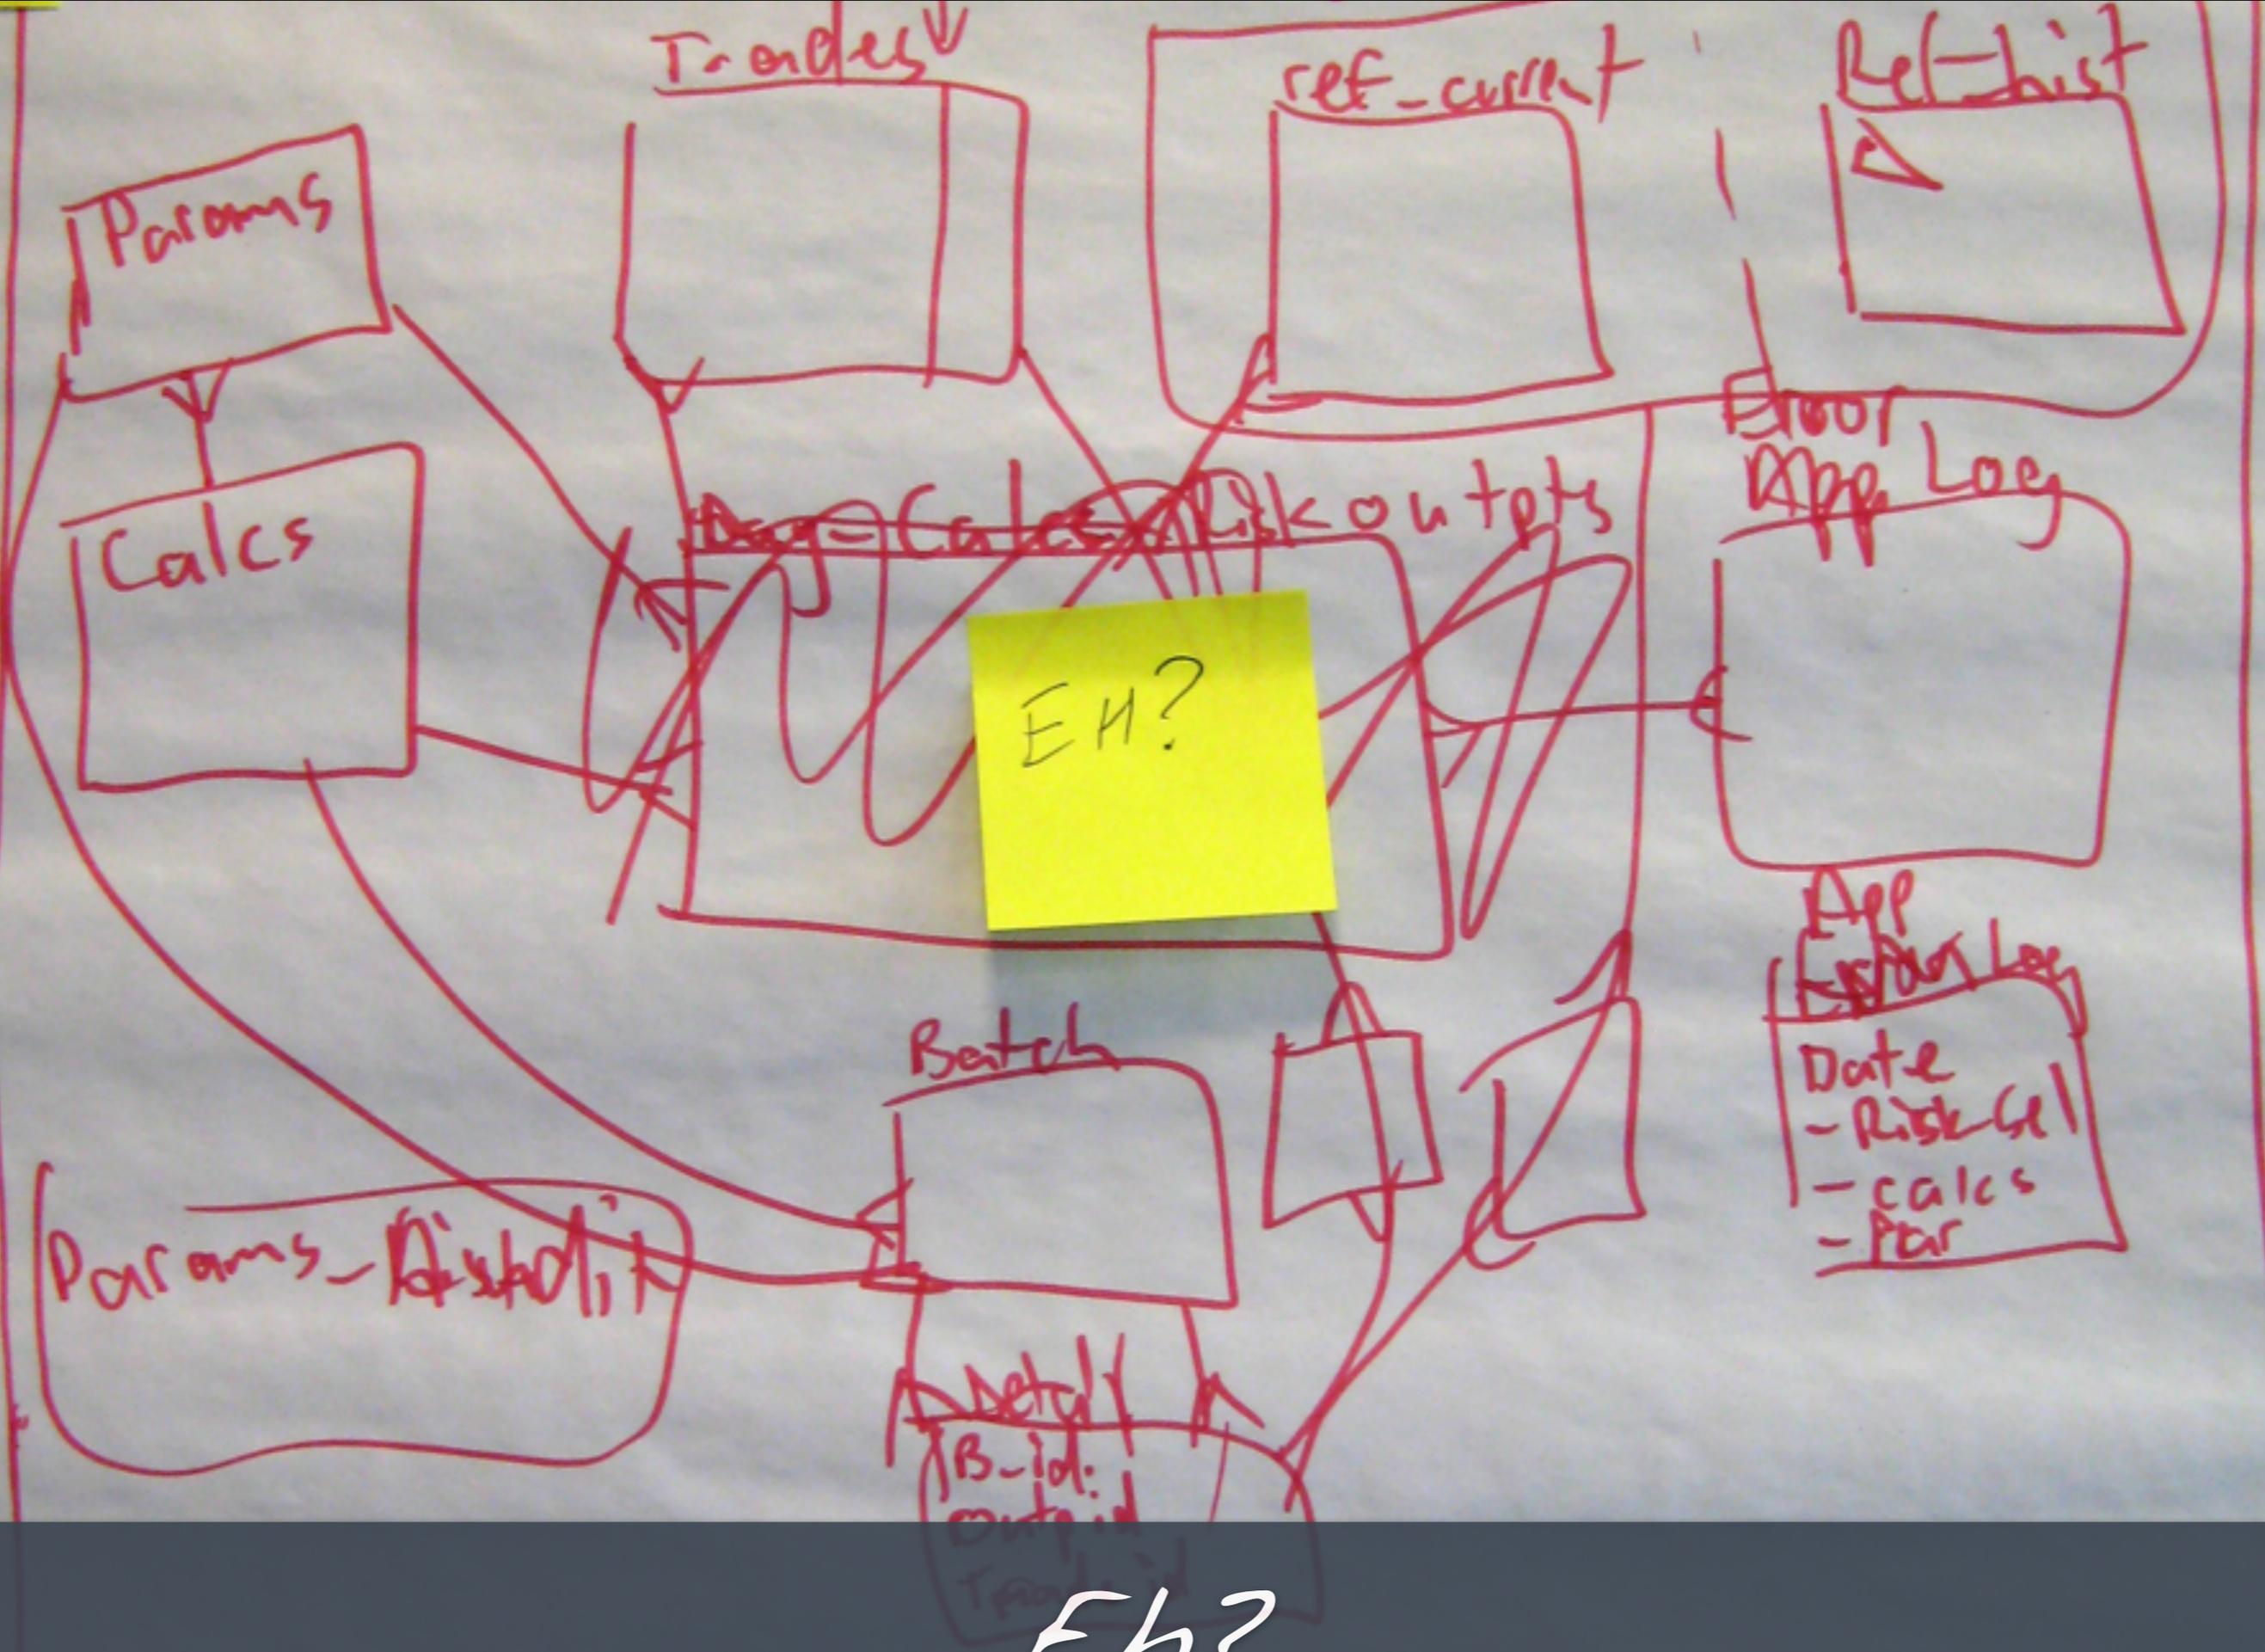

PHYSICAL SECURITY

Choose your own adventure

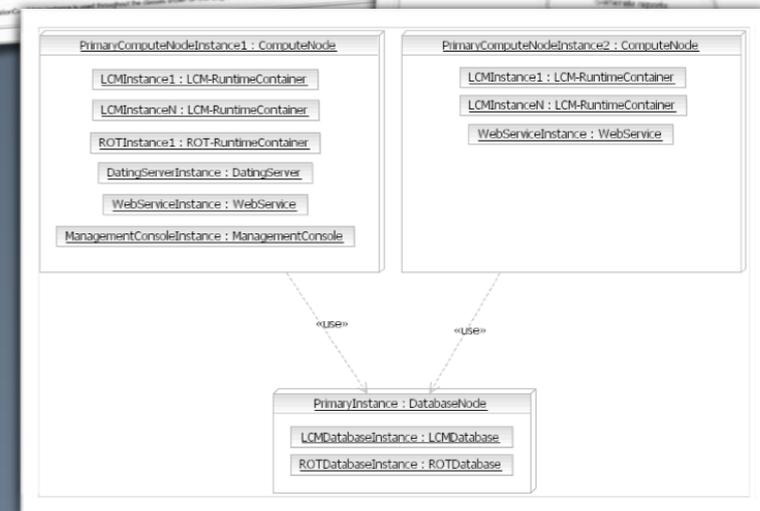

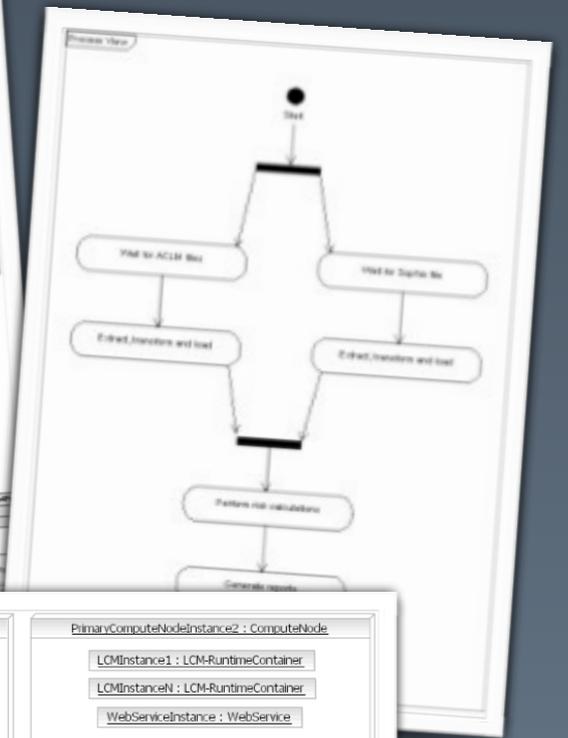

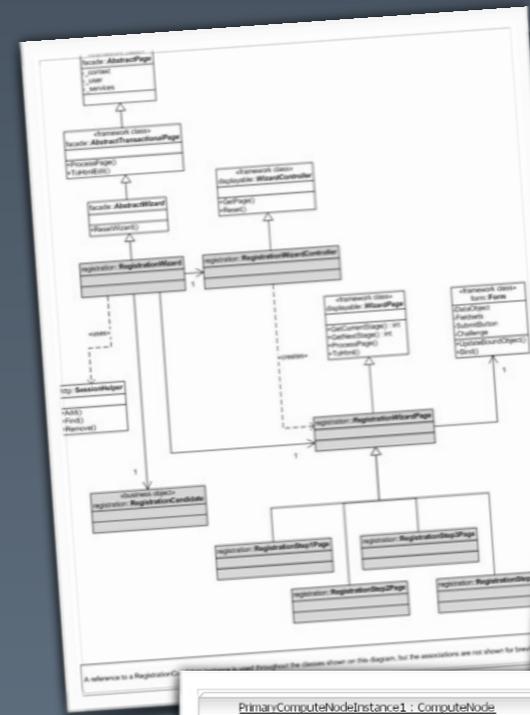

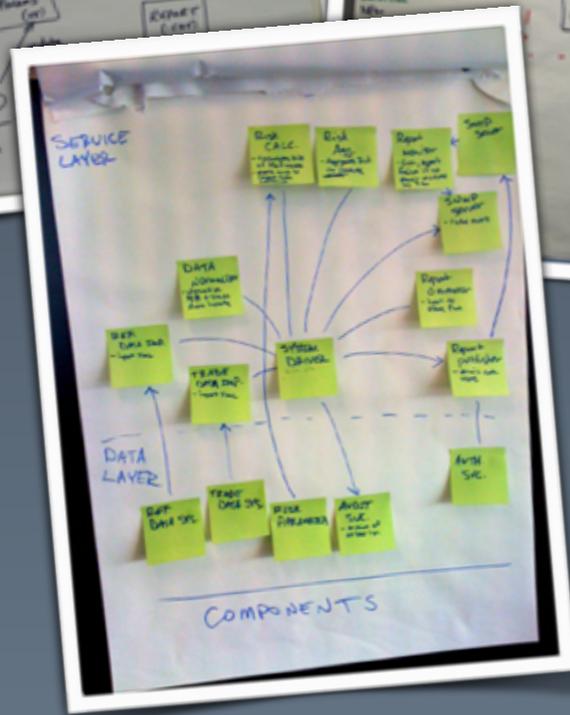

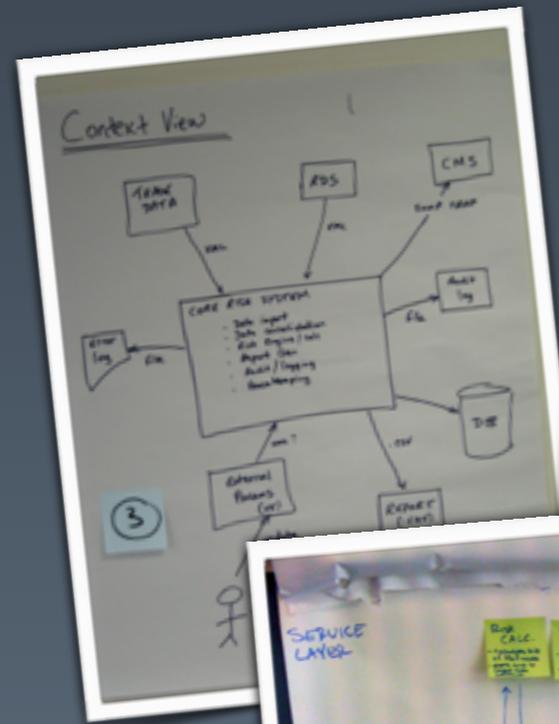

Should have used a whiteboard!

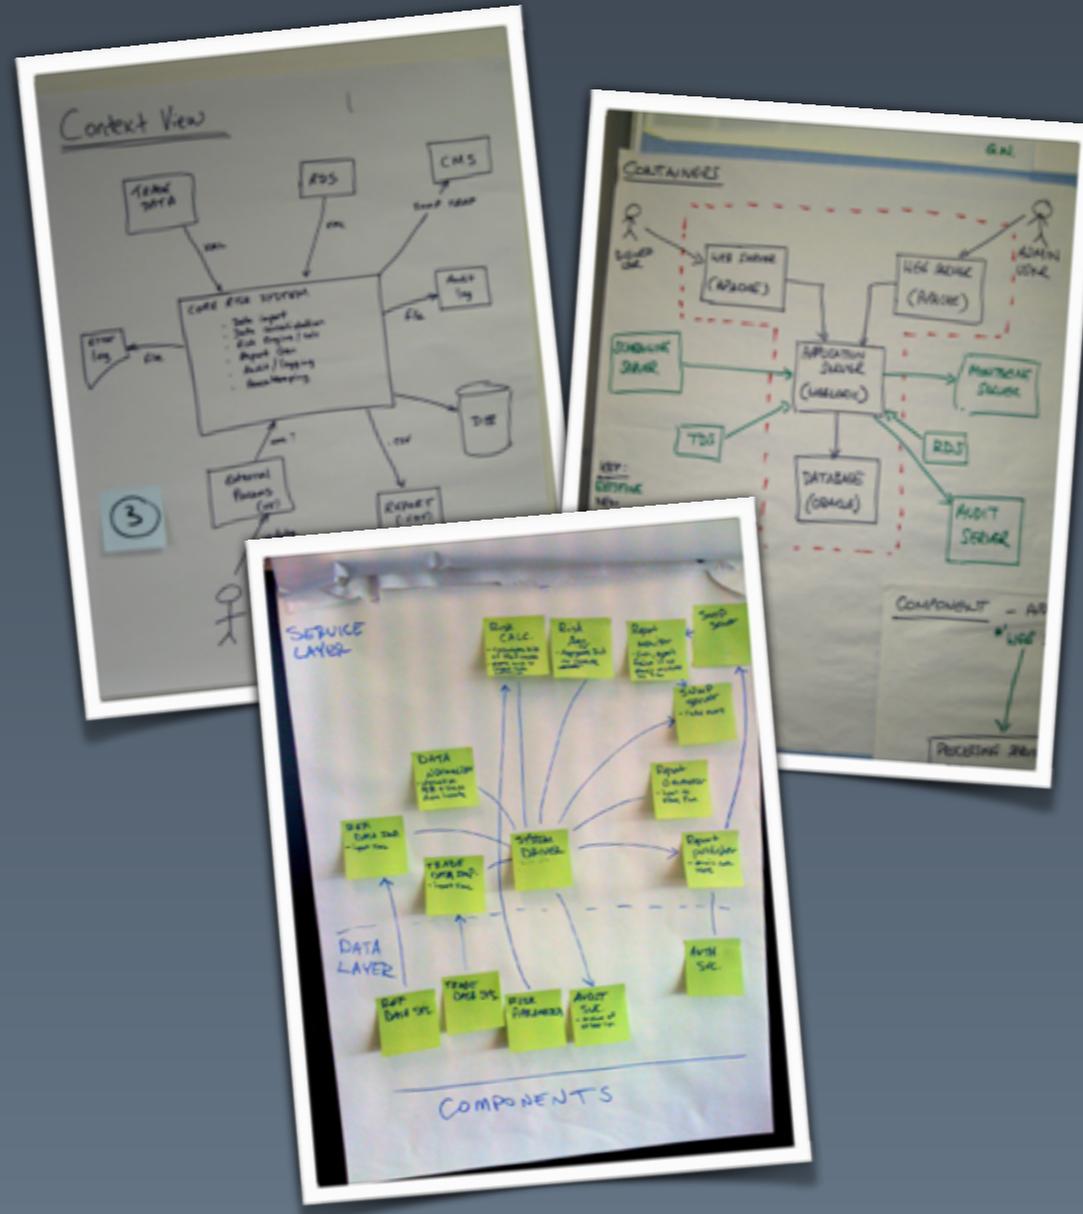

EH?

UML tool?

Whiteboard or flip chart?

Collaborative design

(e.g. pair architecting)

Do the **names**
of those views make sense?

Conceptual vs Logical

Process vs Functional

Development vs Physical

Development vs Implementation

Physical vs Implementation

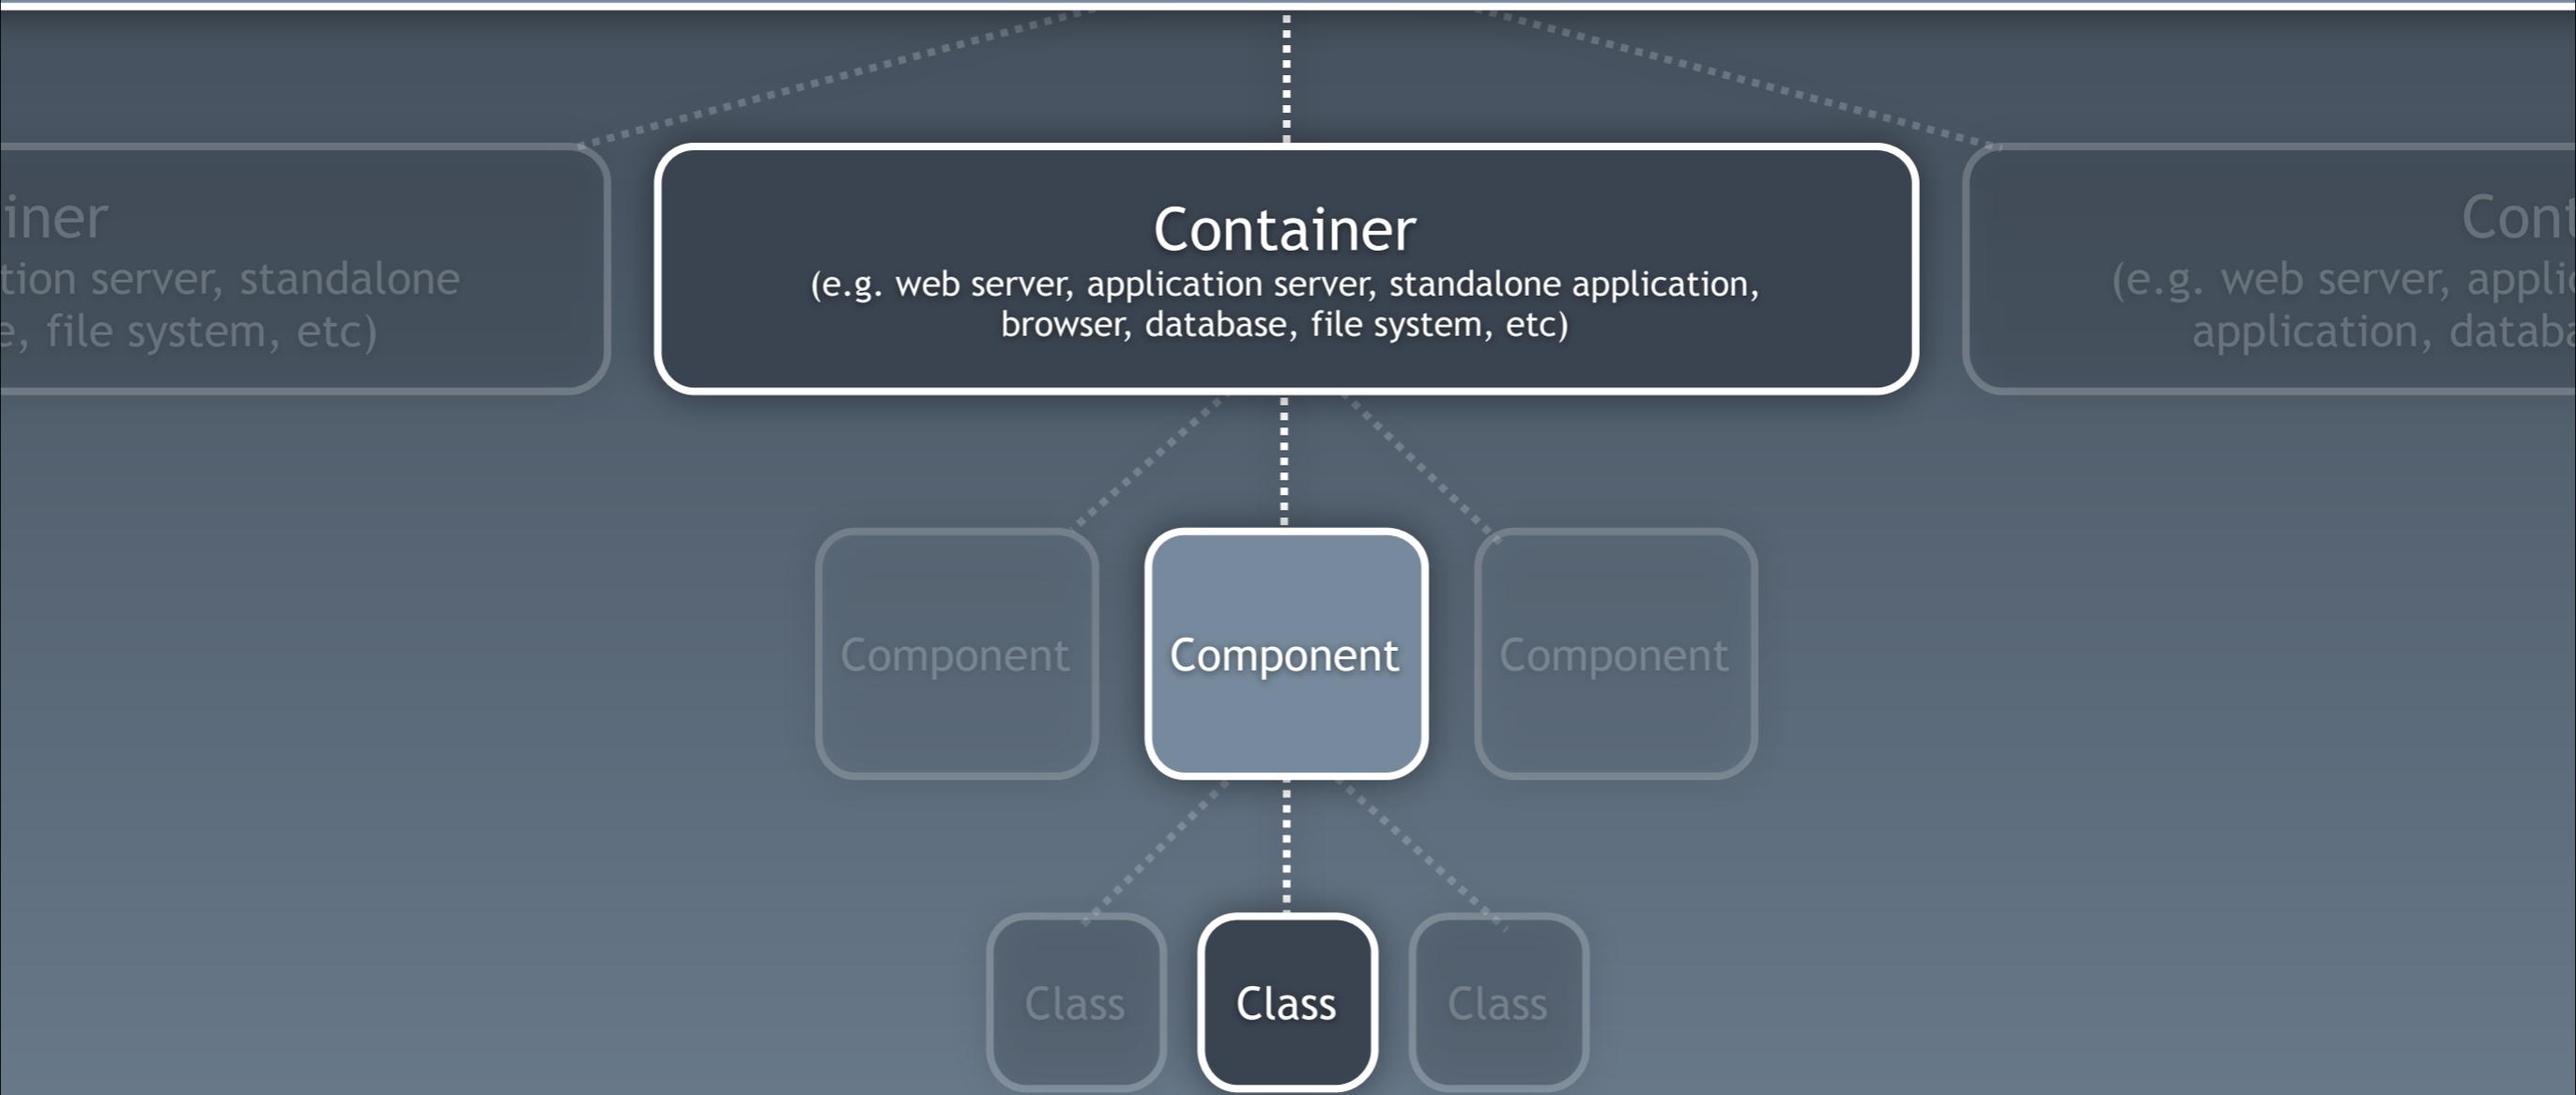

Physical vs Deployment

Would you

code

it that way?

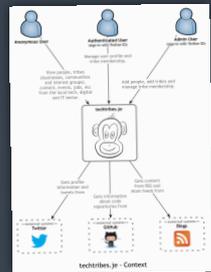

Software System

Agree on a simple set of **abstractions** that the whole team can use to communicate

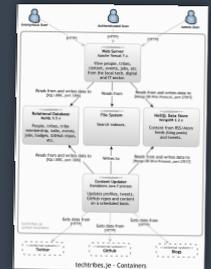

Enterprise Context

A map of all systems within the enterprise

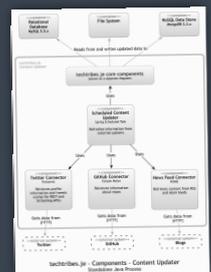

System Context

The system plus users and system dependencies

Containers

The overall shape of the architecture and technology choices

Components

Logical components and their interactions within a container

Classes

Component or pattern implementation details

Sequence &
collaboration

Process &
workflow

C4

(static structure)

Infrastructure

Deployment

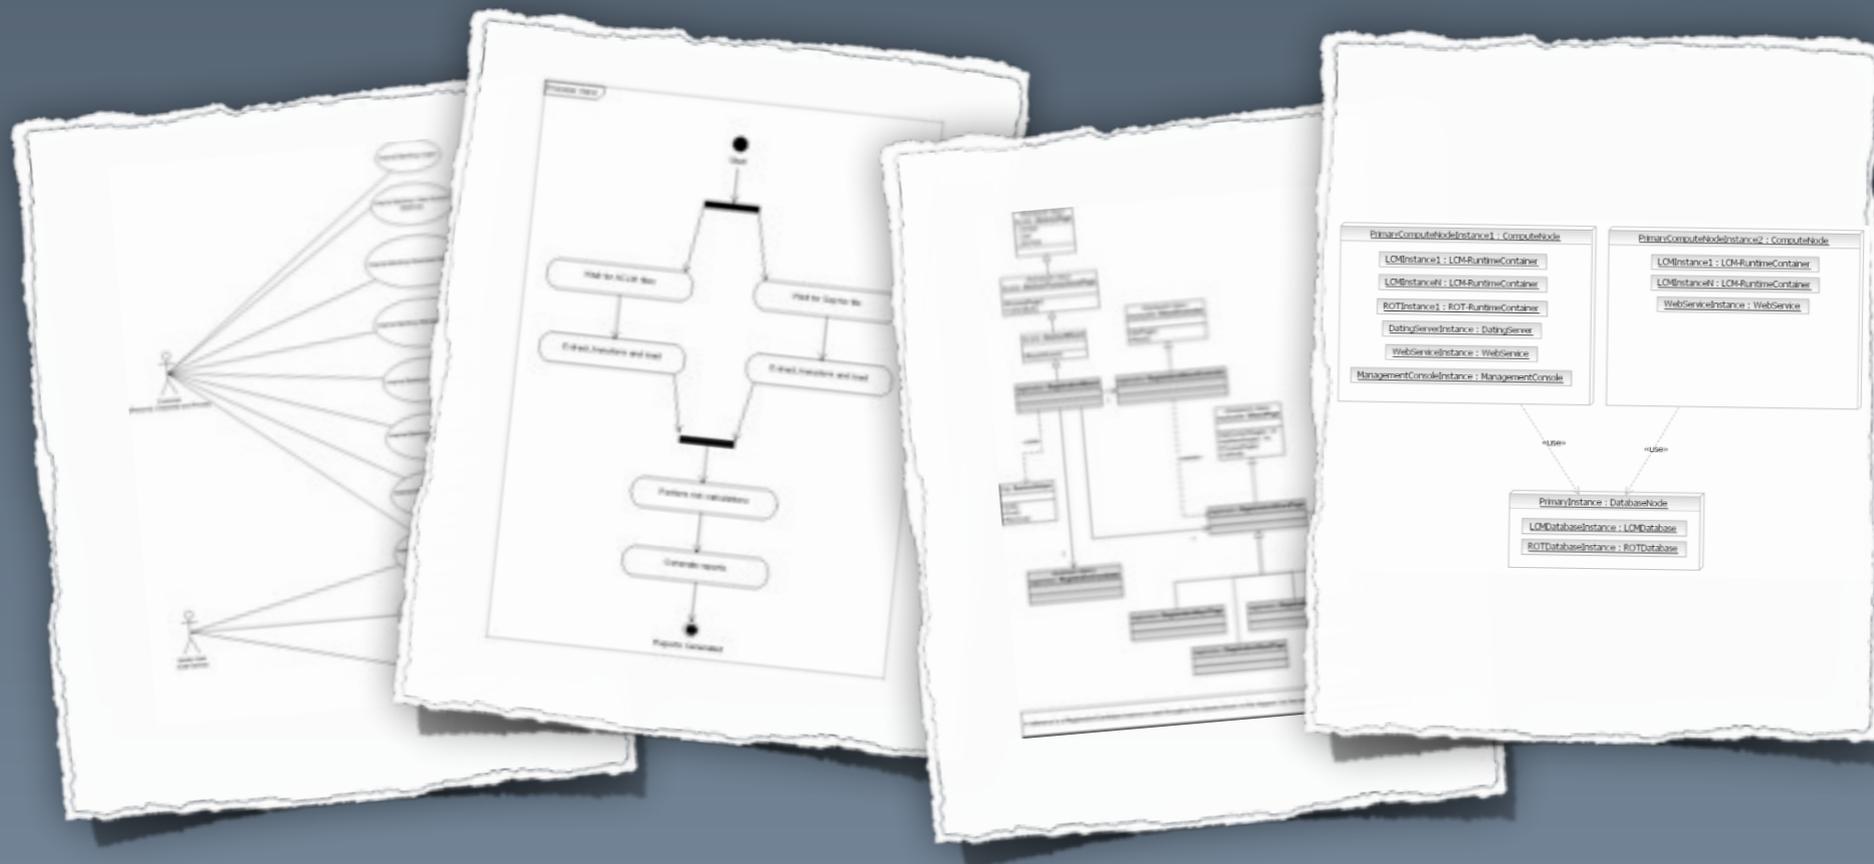

This **isn't** about
creating a standard

A common set of
abstractions

is more important than
a common notation

I do use UML

(activity, class, sequence, collaboration, state)

If you're interested in how to use UML...

@ C5 Alliance plans Microsoft events in Channel Islands

Channel Island cloud provider, C5 Alliance are organising two breakfast events in both Jersey and Guernsey, named 'Leveraging Microsoft Technologies for Regulatory Compliance'. The breakfast briefings are due to include demonstrations of the latest Microsoft technologies and how they are combined. The briefings will cover Microsoft CRM process driven forms, SharePoint Workflow & Collaboration and SQL Server Data Warehousing technology. C5 Alliance, who work with a number of clients, both financial and...

@ Jersey residents set to have choice in fibre broadband

Sure customers will soon be able to access Jersey's fibre network following the reaching of an agreement between Sure and JT that finalises the commercial arrangements for access to the network. The agreement means that JT has gone some way to fulfilling the second condition of the eight that were set out in the States of Jersey's funding arrangements for the network, as agreed by the Treasury Minister, Senator Philip Ozouf. "This is excellent news for our broadband customers who have been extremely pati...

@ Logicalis Group taking over Jersey cloud provider

Logicalis Group, the International IT solutions and managed services provider, has announced the acquisition of Jersey's IConsult Limited, a privately owned Jersey company and provider of desktop and mail hosted solutions to the small medium businesses (SMB) market within the Channel Islands. Through their data facility in Jersey the company services over 800 users on the islands, mainly in the financial and professional services sectors. Their main offering is a hosted desktop solution, using primarily ...

Ted talk

Agile software

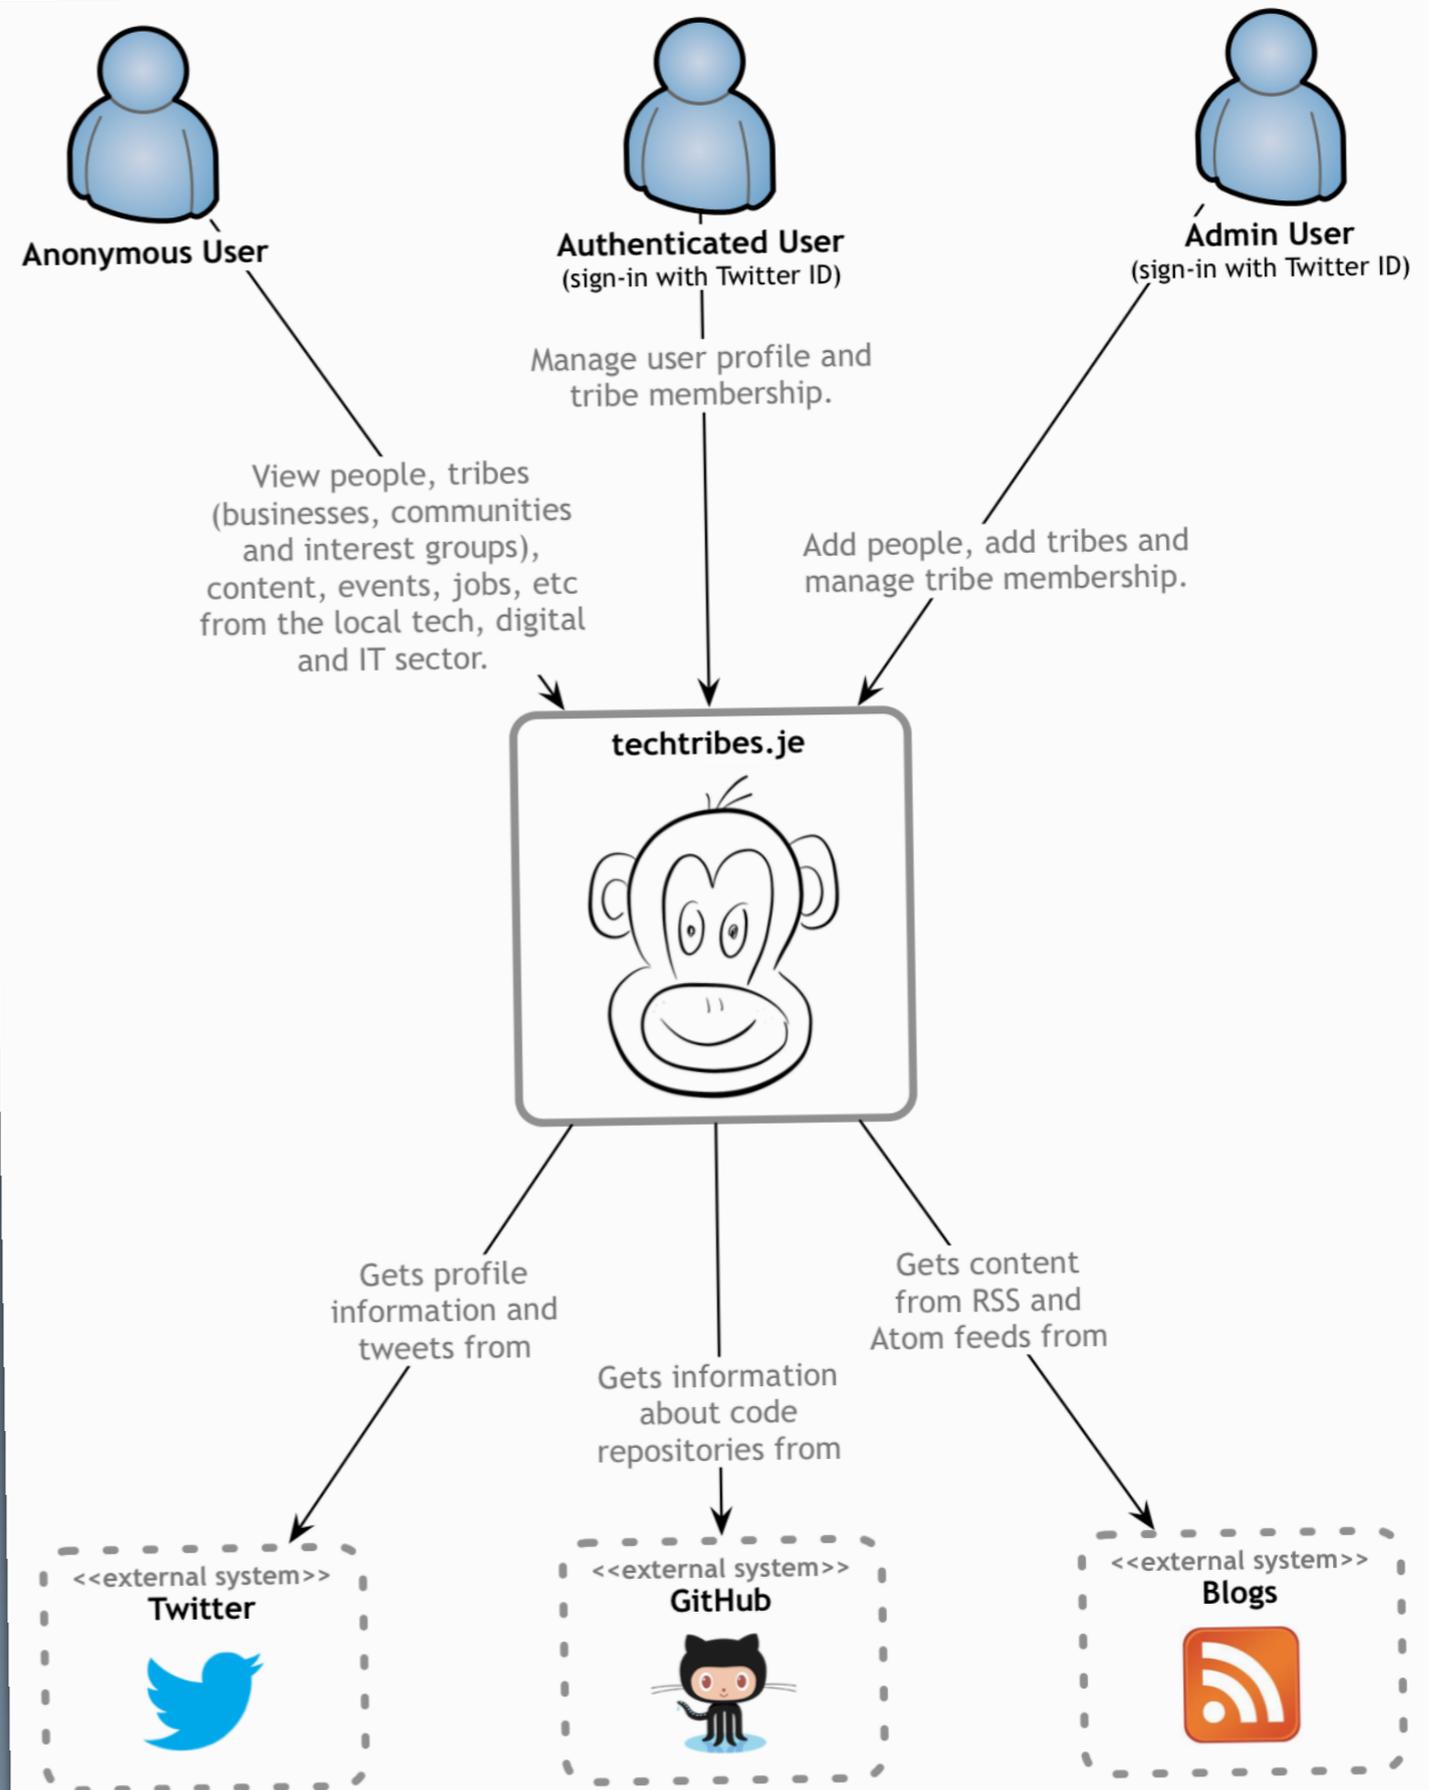

Software architecture and

techtribes.je

Context

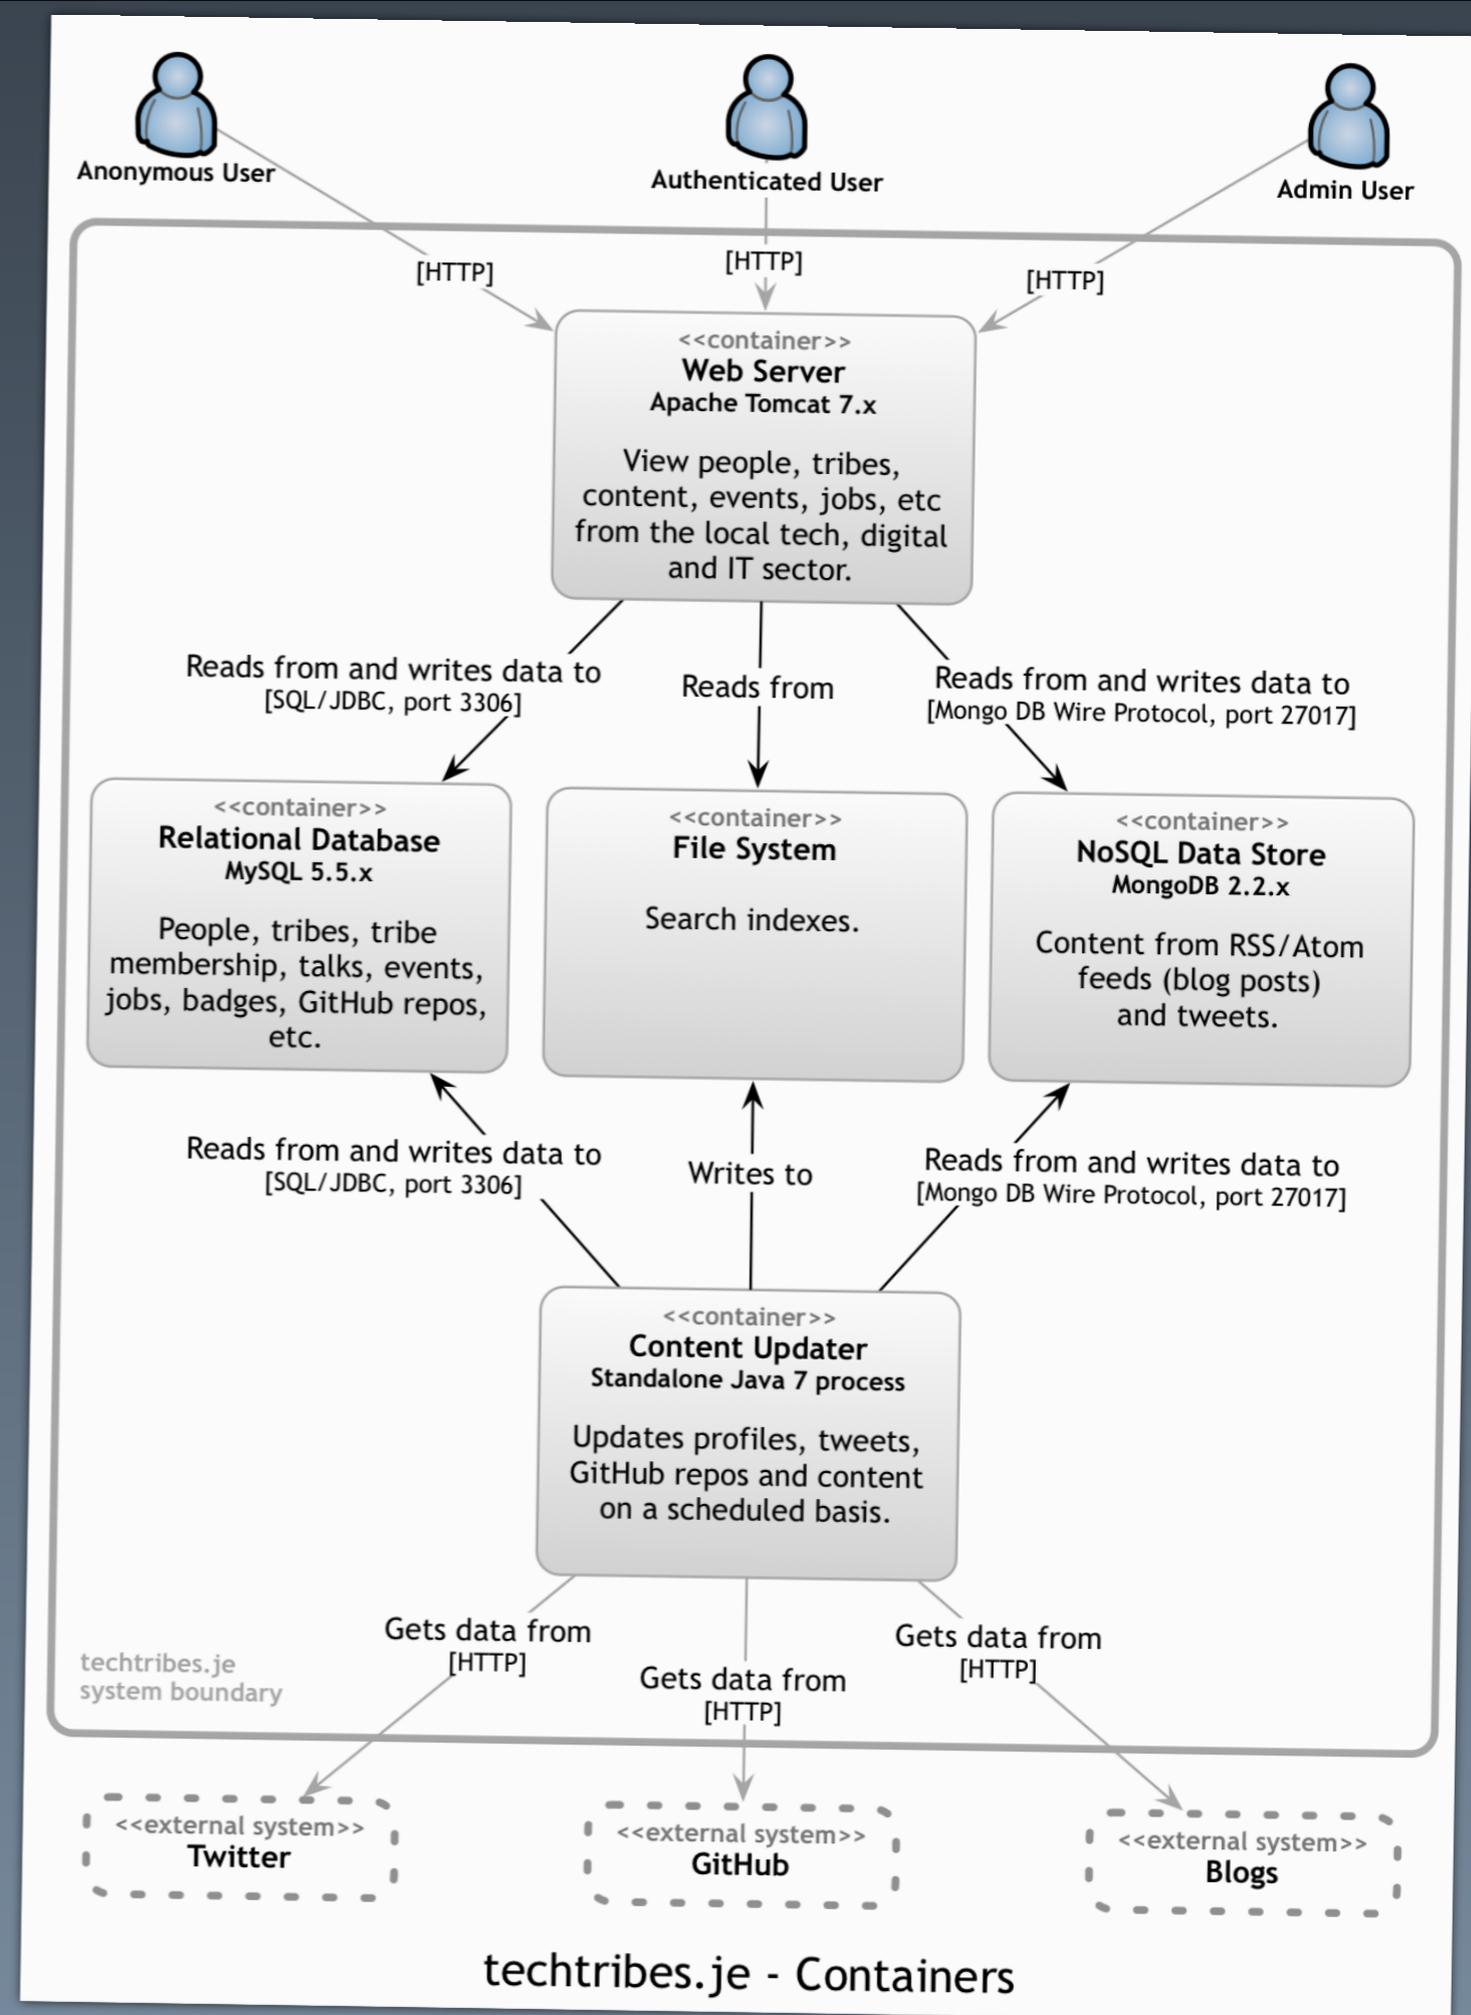

- What are we building?
- Who is using it?
(users, actors, roles, personas, etc)
- How does it fit into the existing IT environment?
(systems, services, etc)

techtribes.je - Context

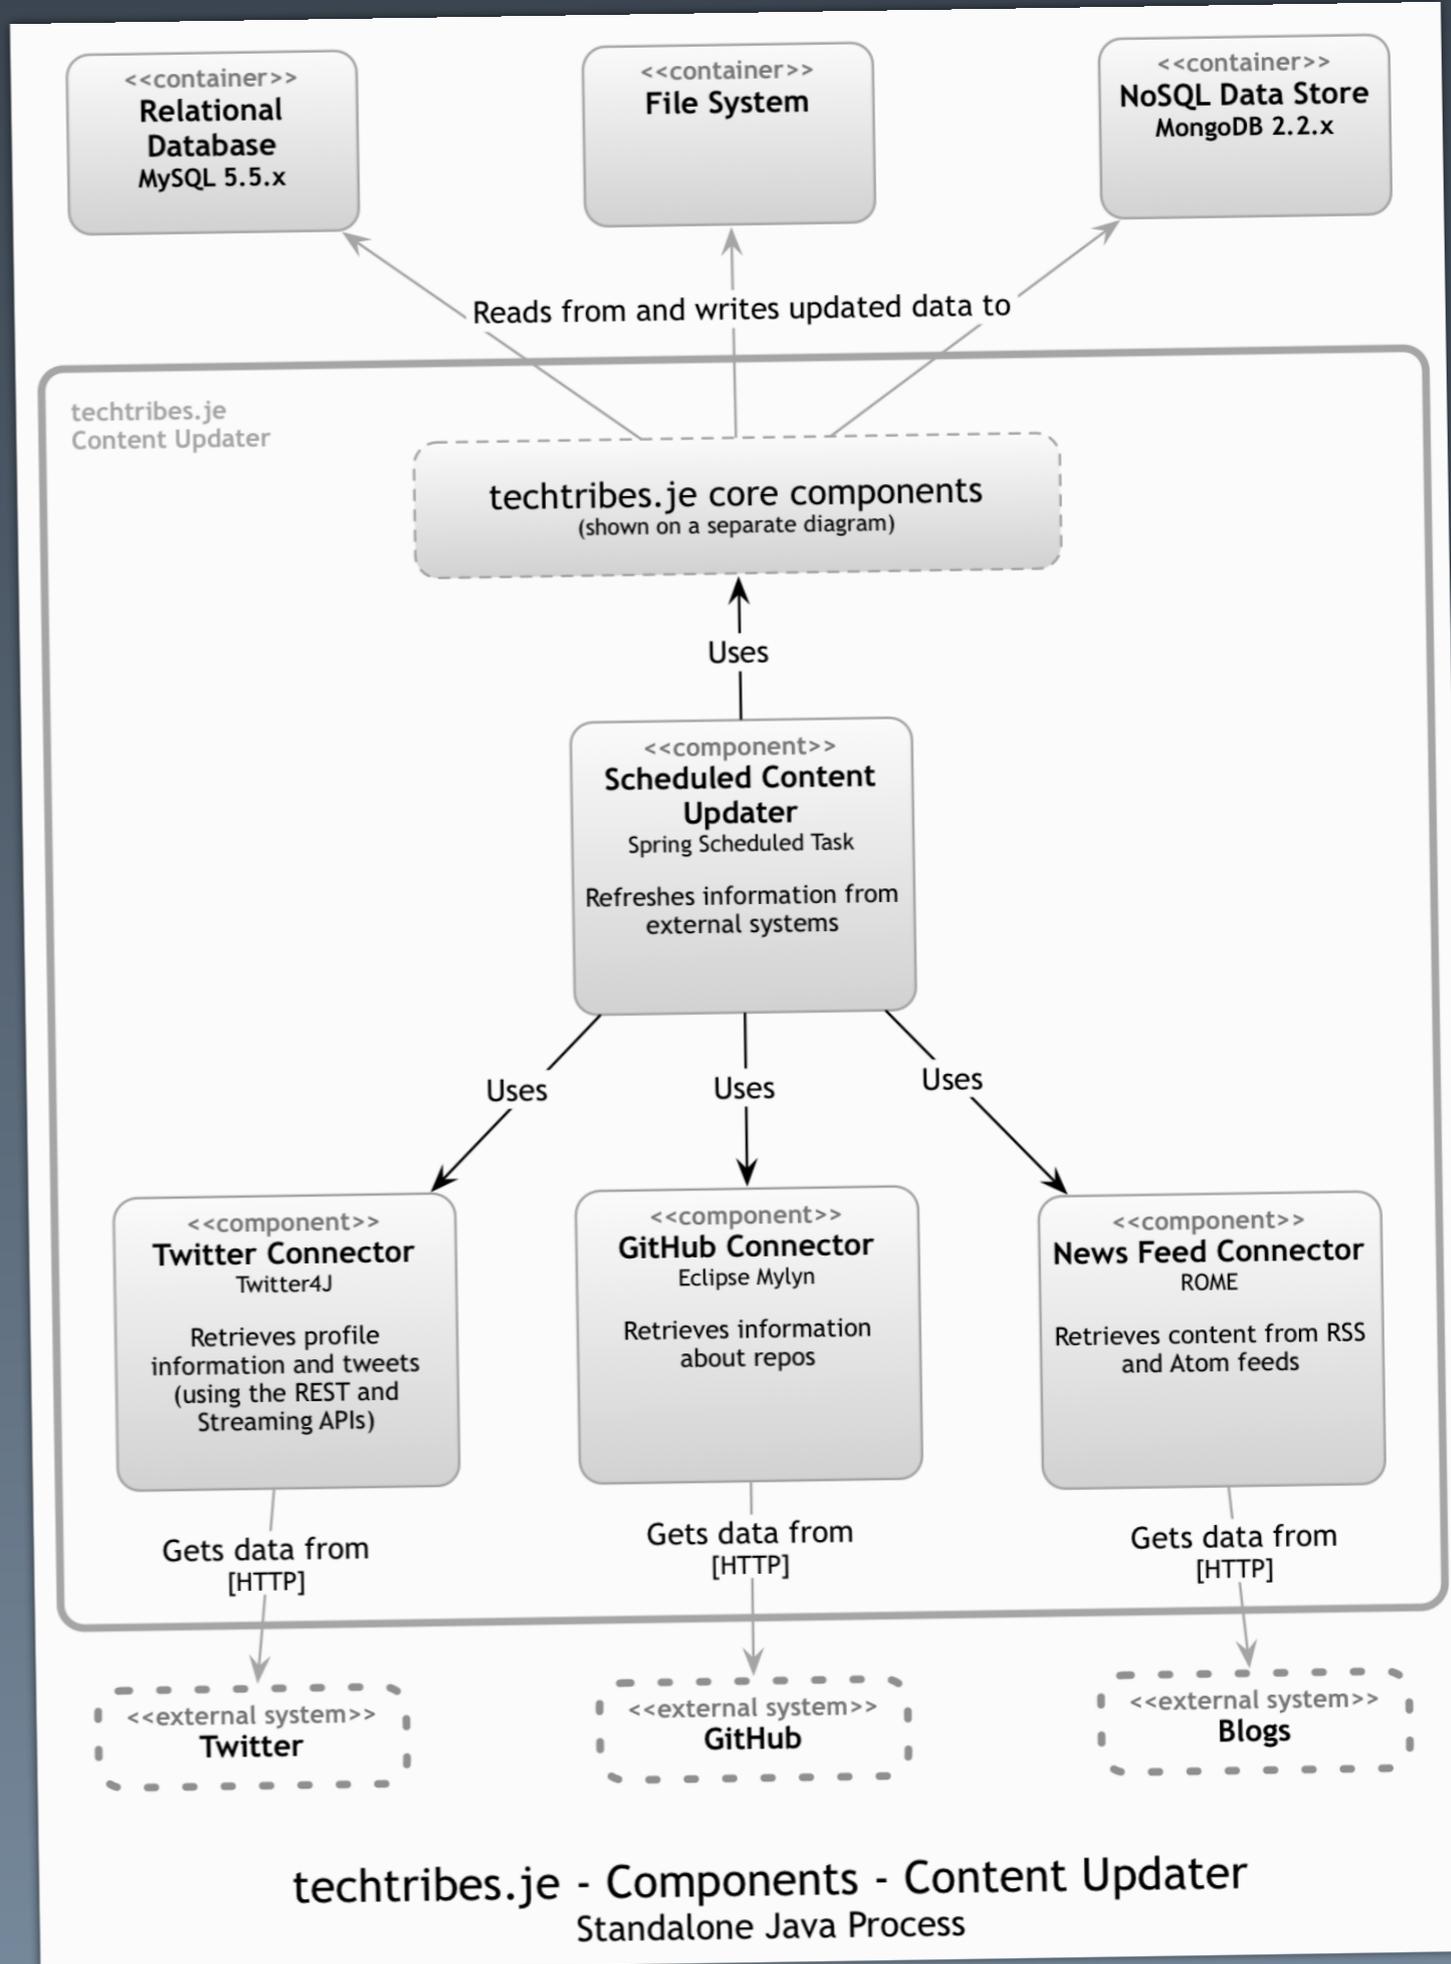

Containers

- What are the high-level technology decisions? (including responsibilities)
- How do containers communicate with one another?
- As a developer, where do I need to write code?

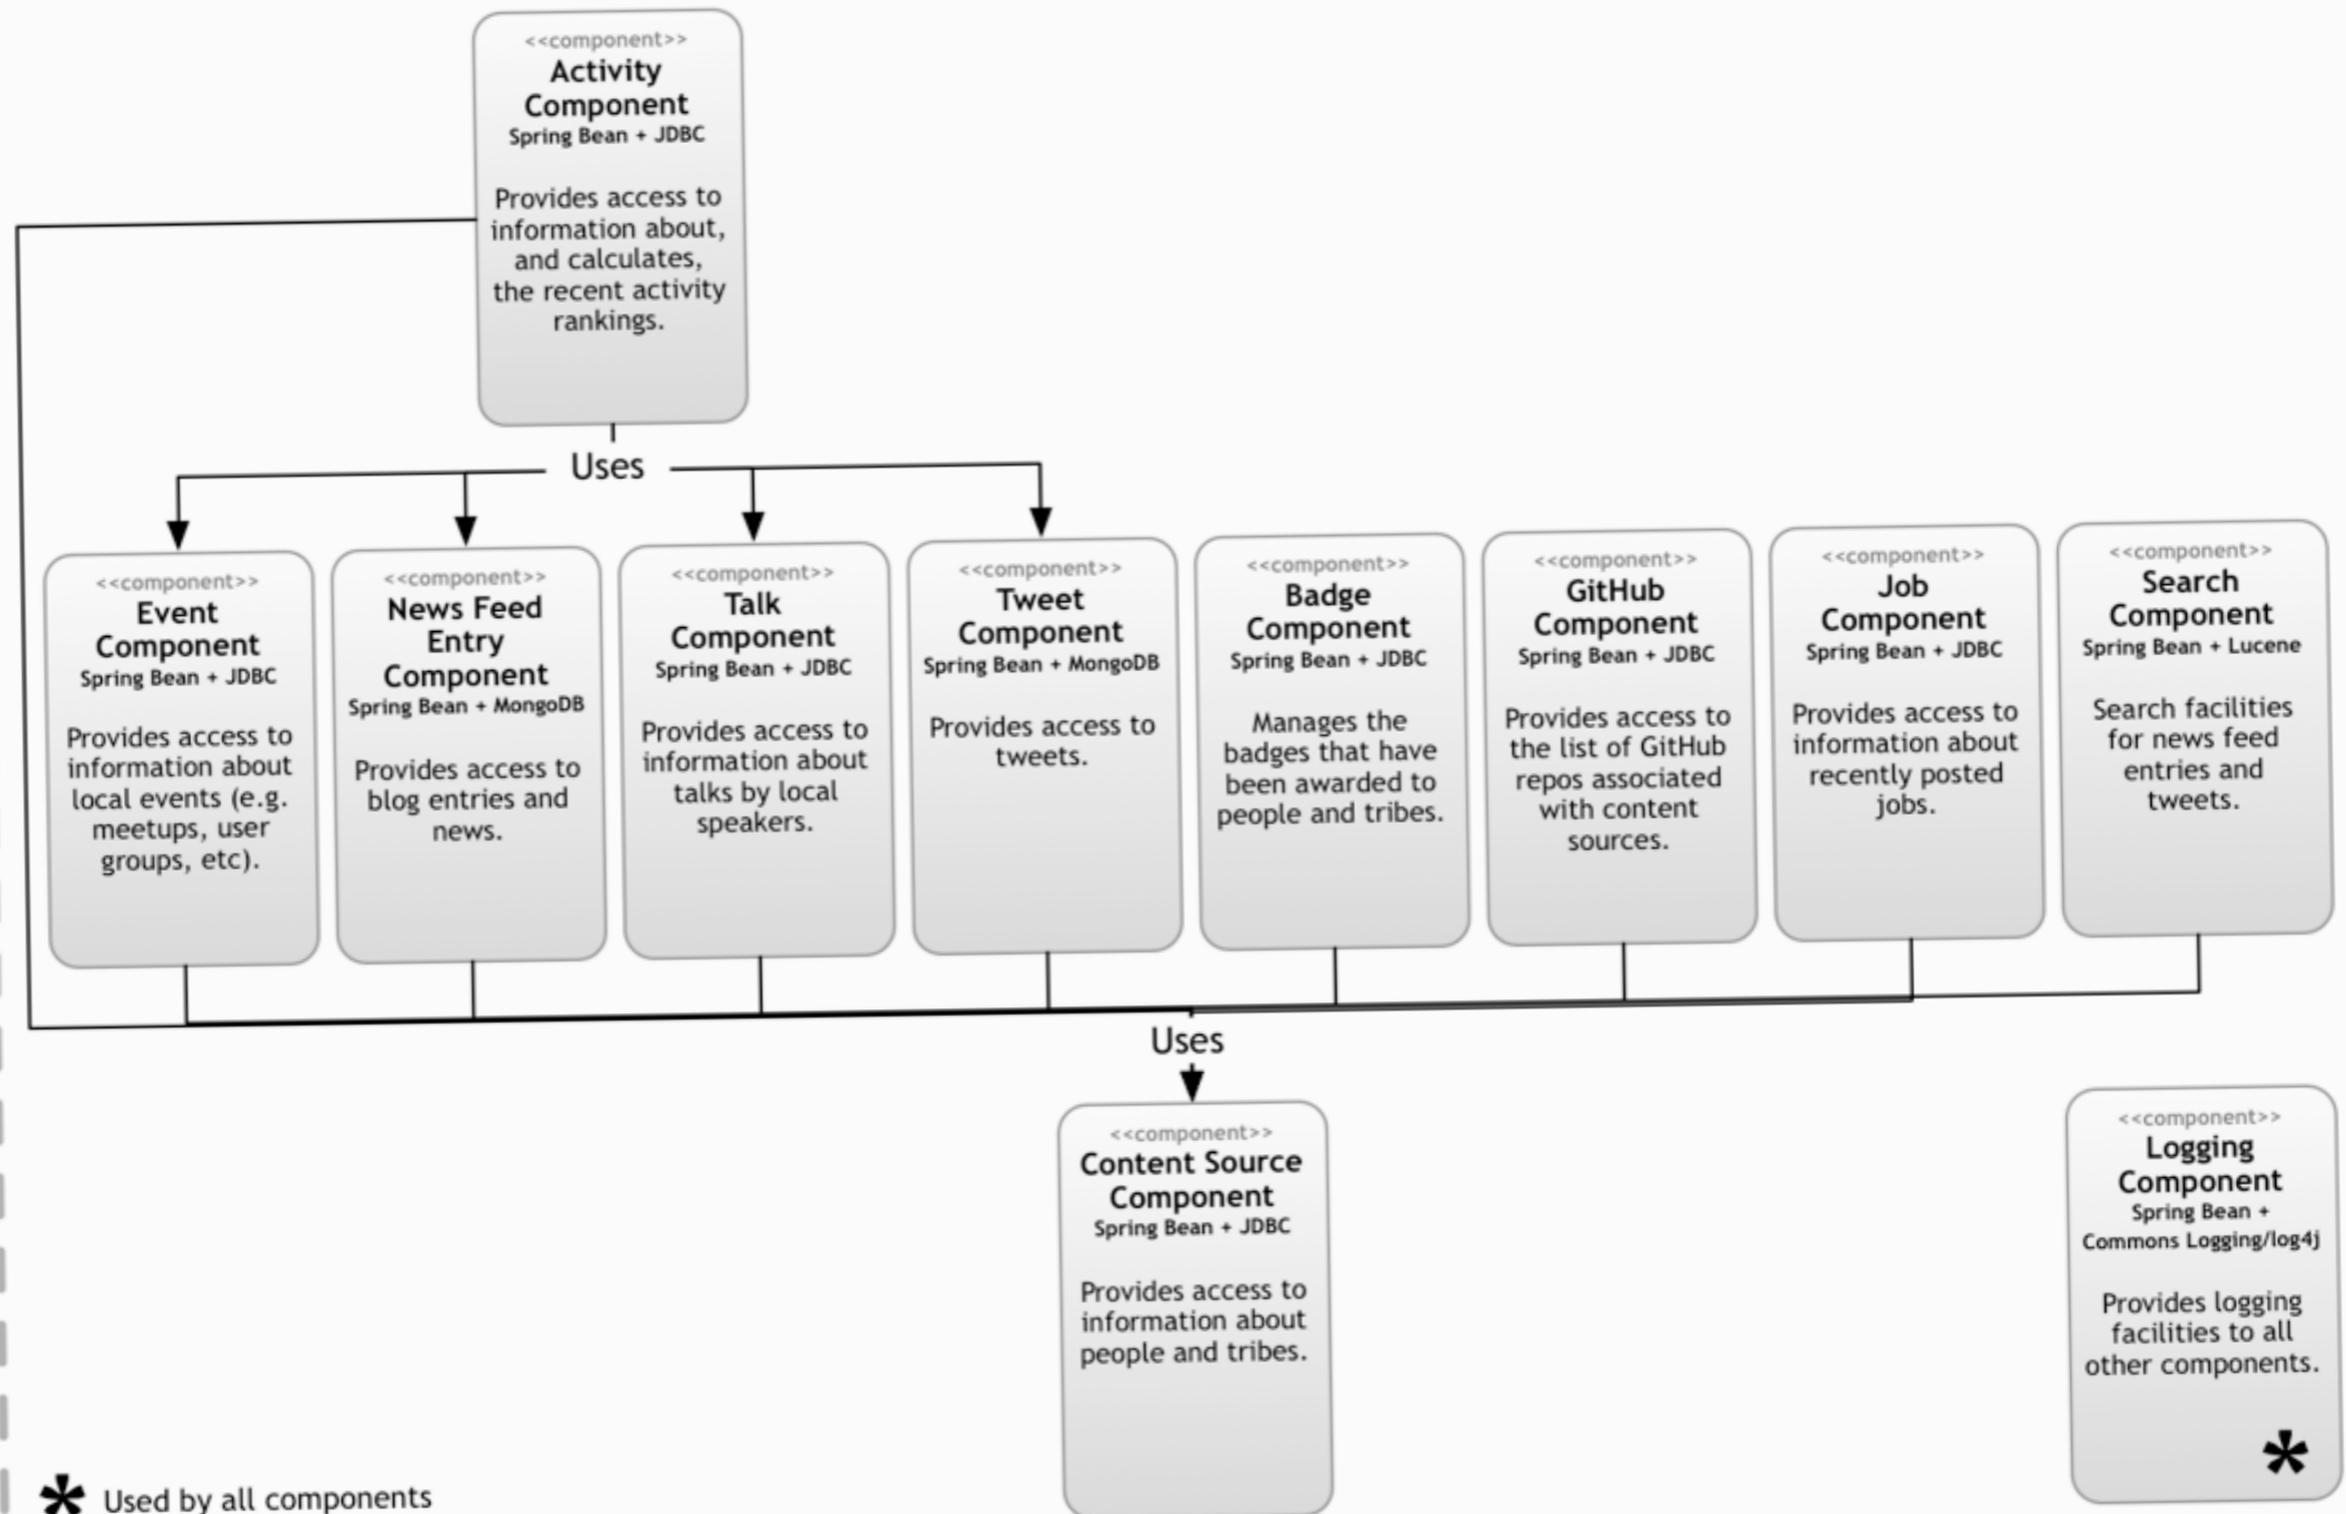

Components

- What components/ services is the container made up of?
- Are the technology choices and responsibilities clear?

Components

* Used by all components

Titles

Short and meaningful, numbered if diagram order is important

Lines

Make line style and arrows explicit, add annotations to lines to provide additional information

Layout

Sticky notes and index cards make a great substitute for drawn boxes, especially early on

Labels

Be wary of using acronyms

Colour

Ensure that colour coding is made explicit

Orientation

Users at the top and database at the bottom? Or perhaps “upside-down”?

Shapes

Don't assume that people will understand what different shapes are being used for

Keys

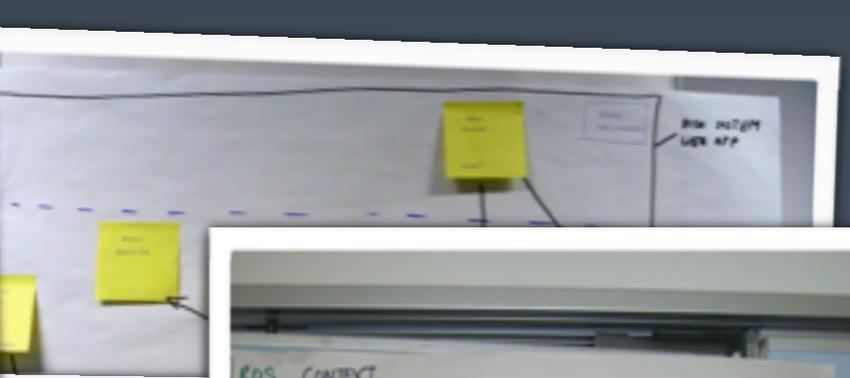

Explain shapes, lines, colours, borders, acronyms, etc

Responsibilities

Adding responsibilities to boxes can provide a nice “at a glance” view (Miller's Law; 7 ± 2)

Some tips for

effective sketches

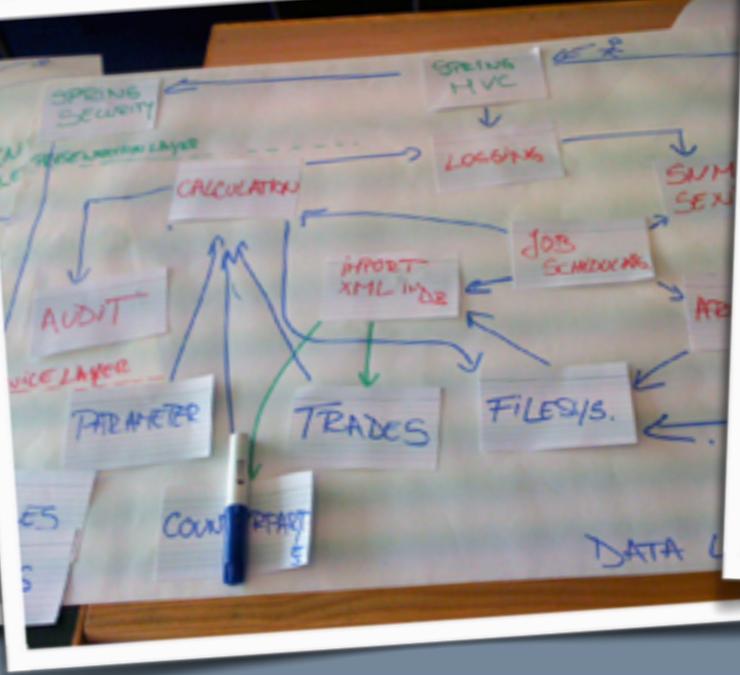

Trade Data (XML) schemas new change

both inputs + results Persistence ORACLE removed?

XML processing (posting + schema)

Risk Engine (Calc)

Monitoring + Alerts (error reports?) report gen.

Checklist

- I can see the solution from multiple levels of abstraction
- I understand the big picture (context)
- I understand the logical containers
- I understand the major components used to satisfy the important user stories/features
- I understand the notation, colour coding, etc used on the diagrams
- I can see the traceability between diagrams
- I understand the major technology decisions
- I understand the implementation strategy (frameworks, libraries, APIs, etc)

How would you

code it?

Redraw your diagrams for the financial risk system

Think about the diagrams you've seen,
the feedback given and the C4 approach
(context, containers and one component diagram)

The C4 *sketches*

are an excellent way to

communicate

software architecture

Every
software developer
should know how to

sketch

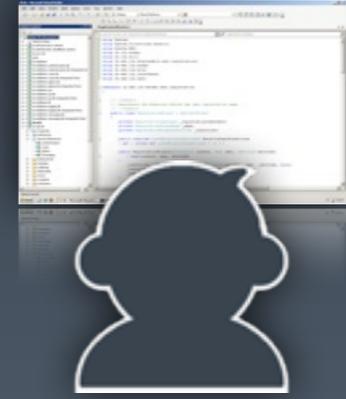

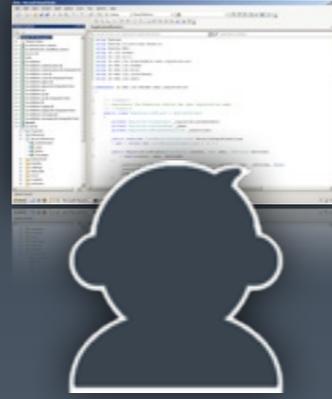

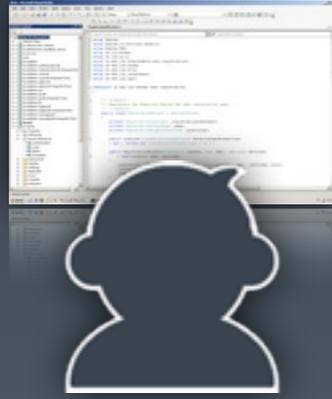

Architecture sketching

assists with having

better conversations

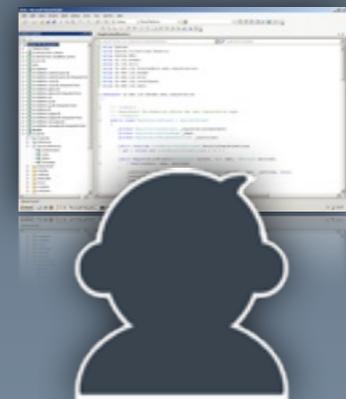

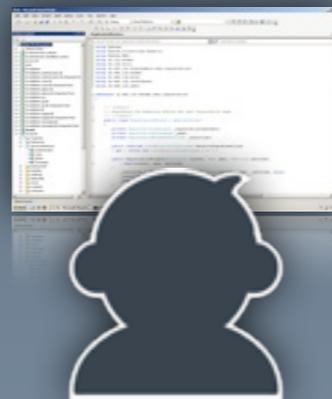

Architecture sketching

assists with

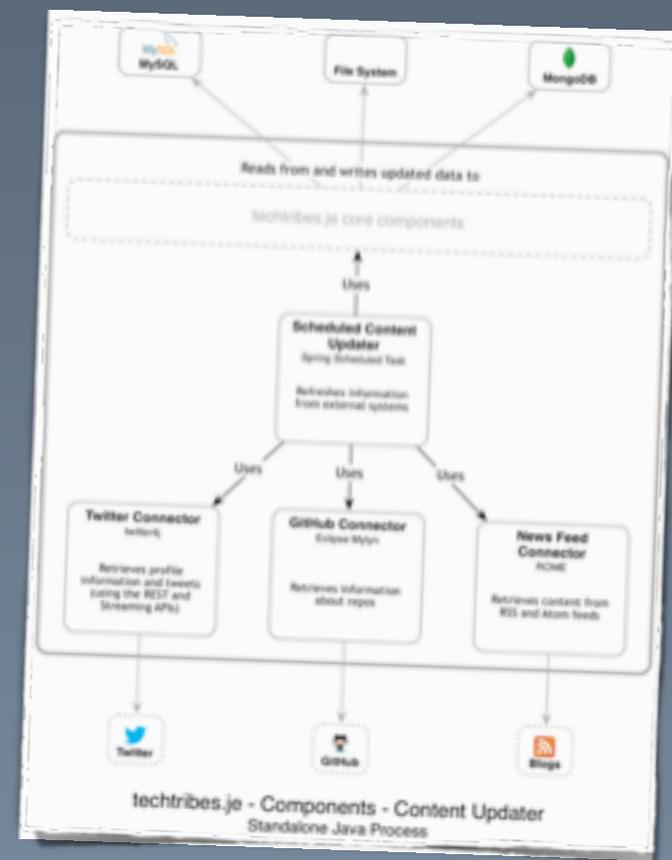

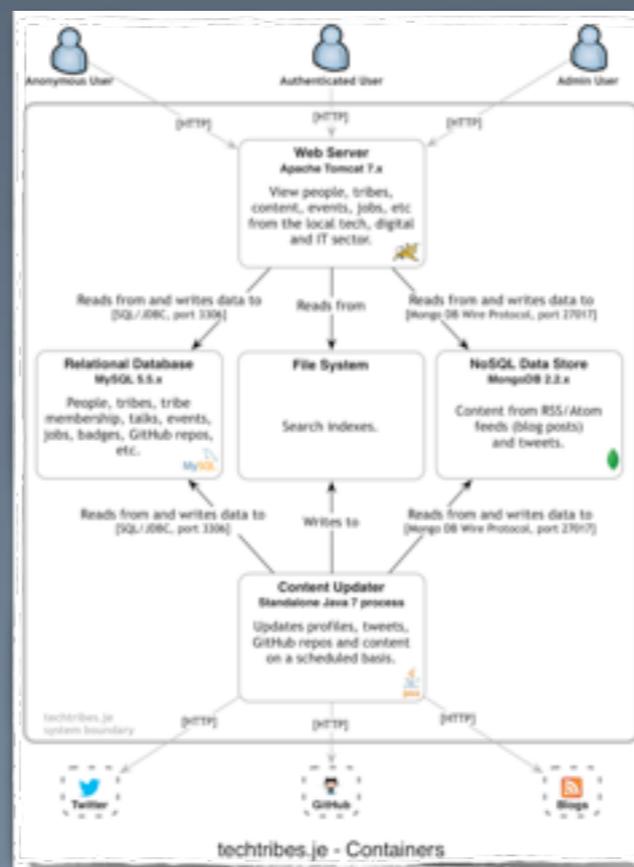

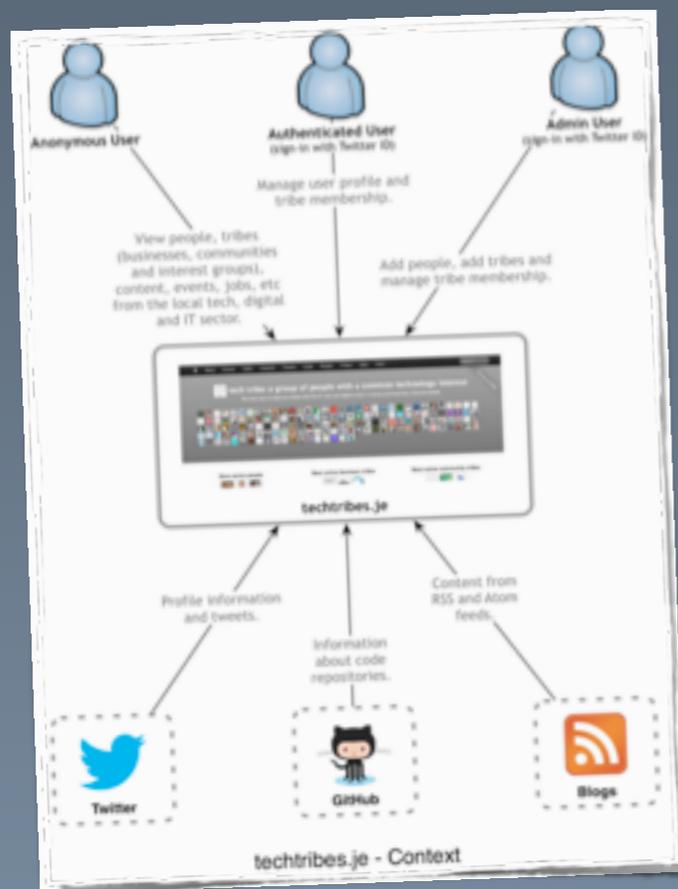

collective ownership

of the code

Pictures

are the simplest form of documentation

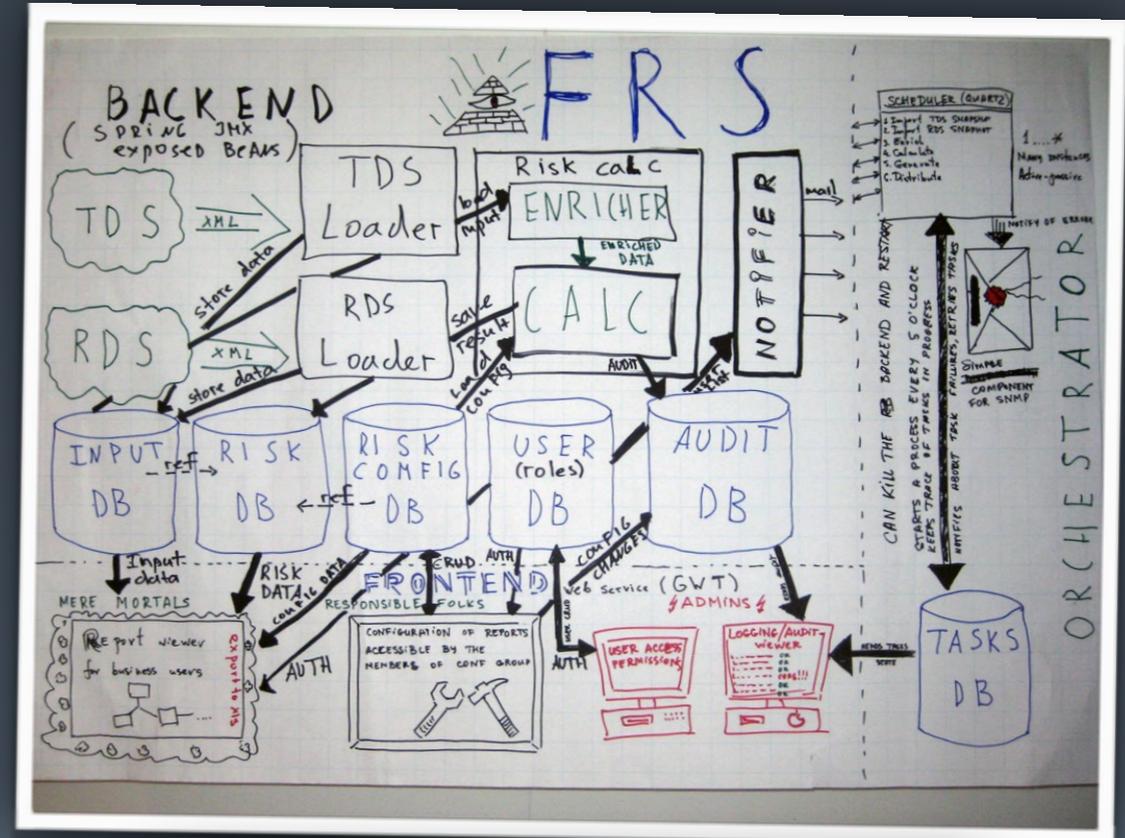

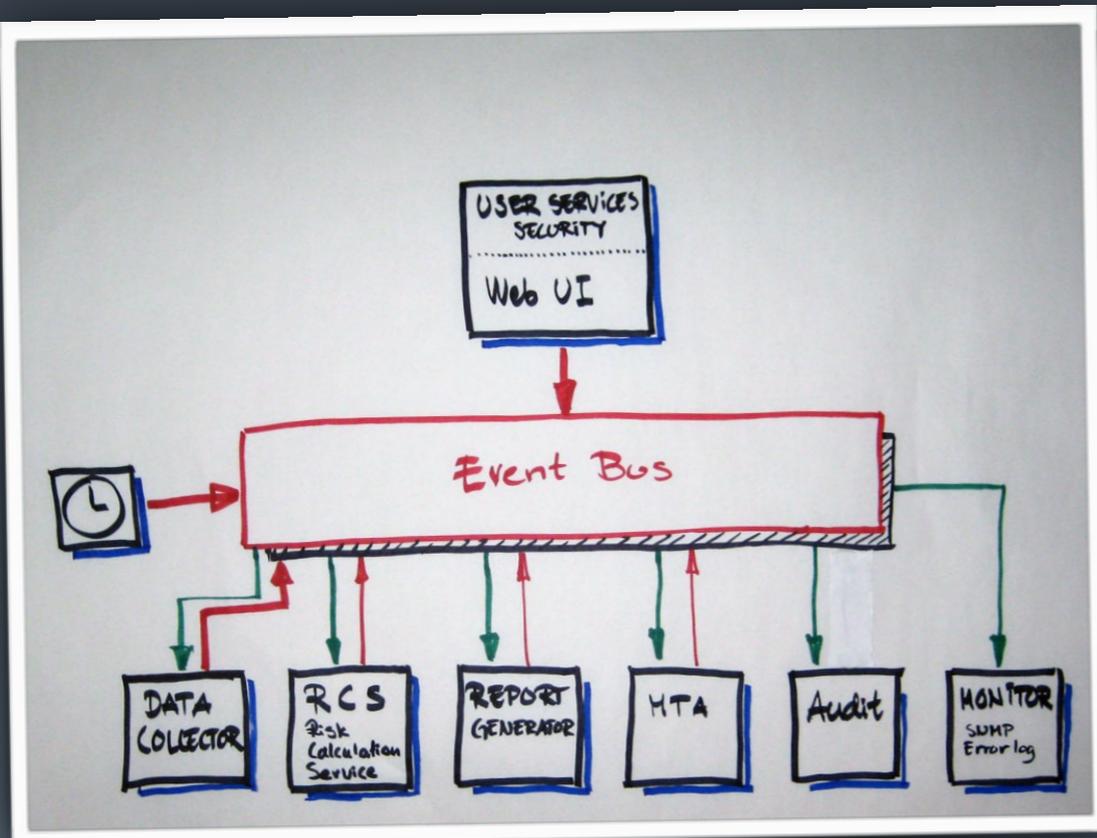

Architecture sketches

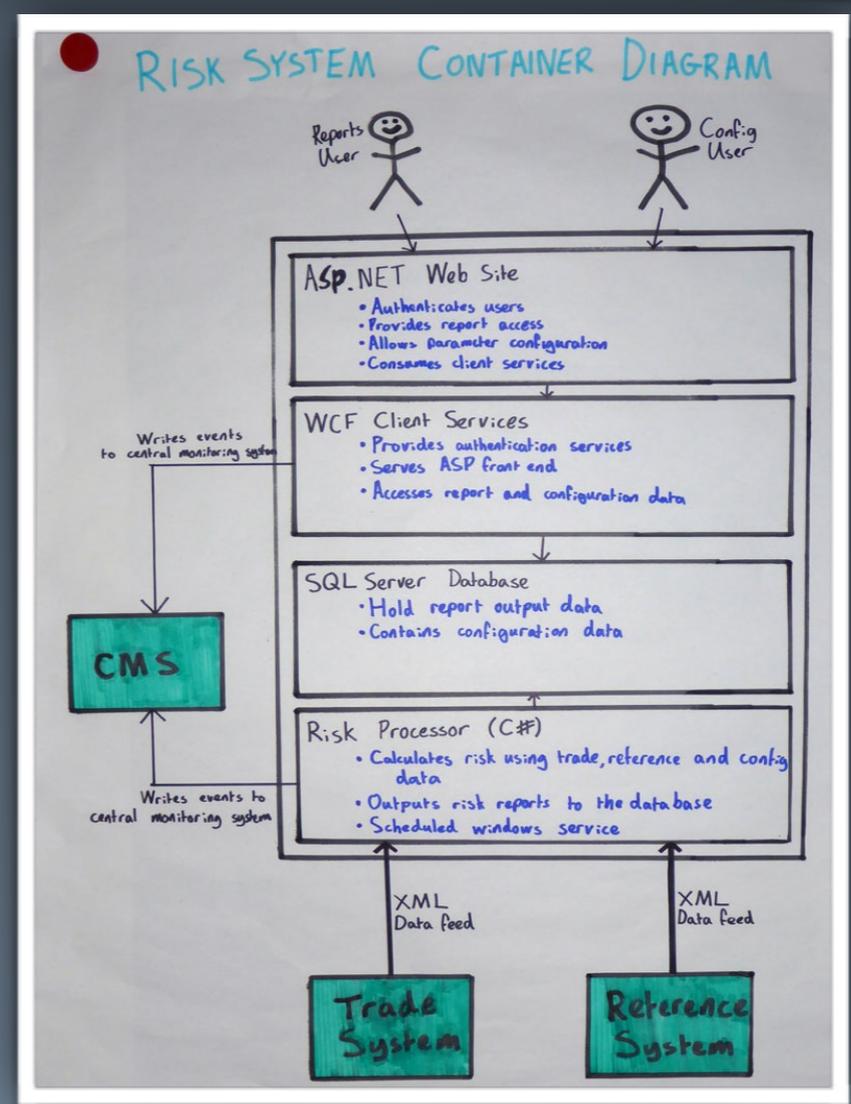

are not

comprehensive

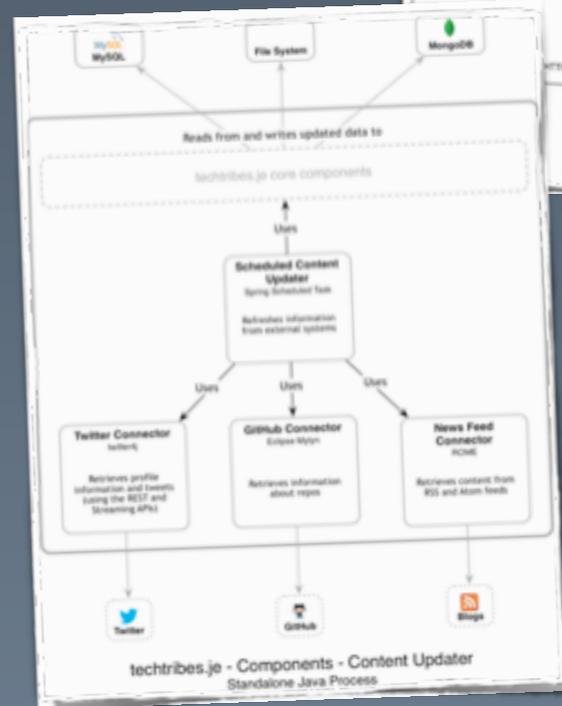

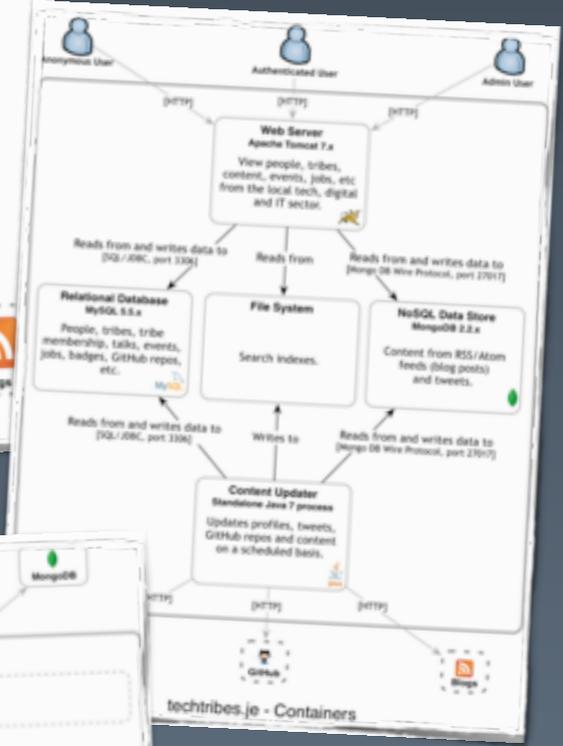

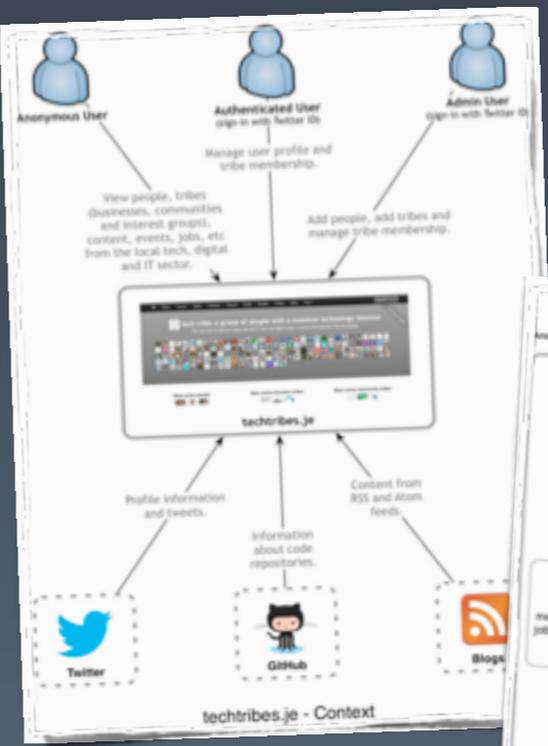

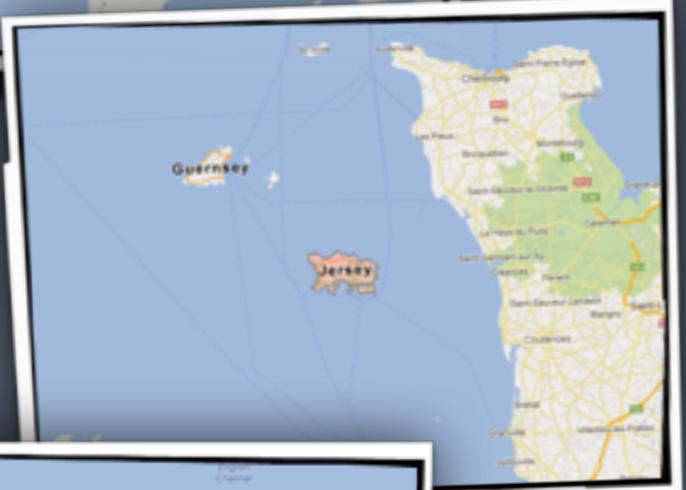

models

Architecture sketches are not art (although they can be!)

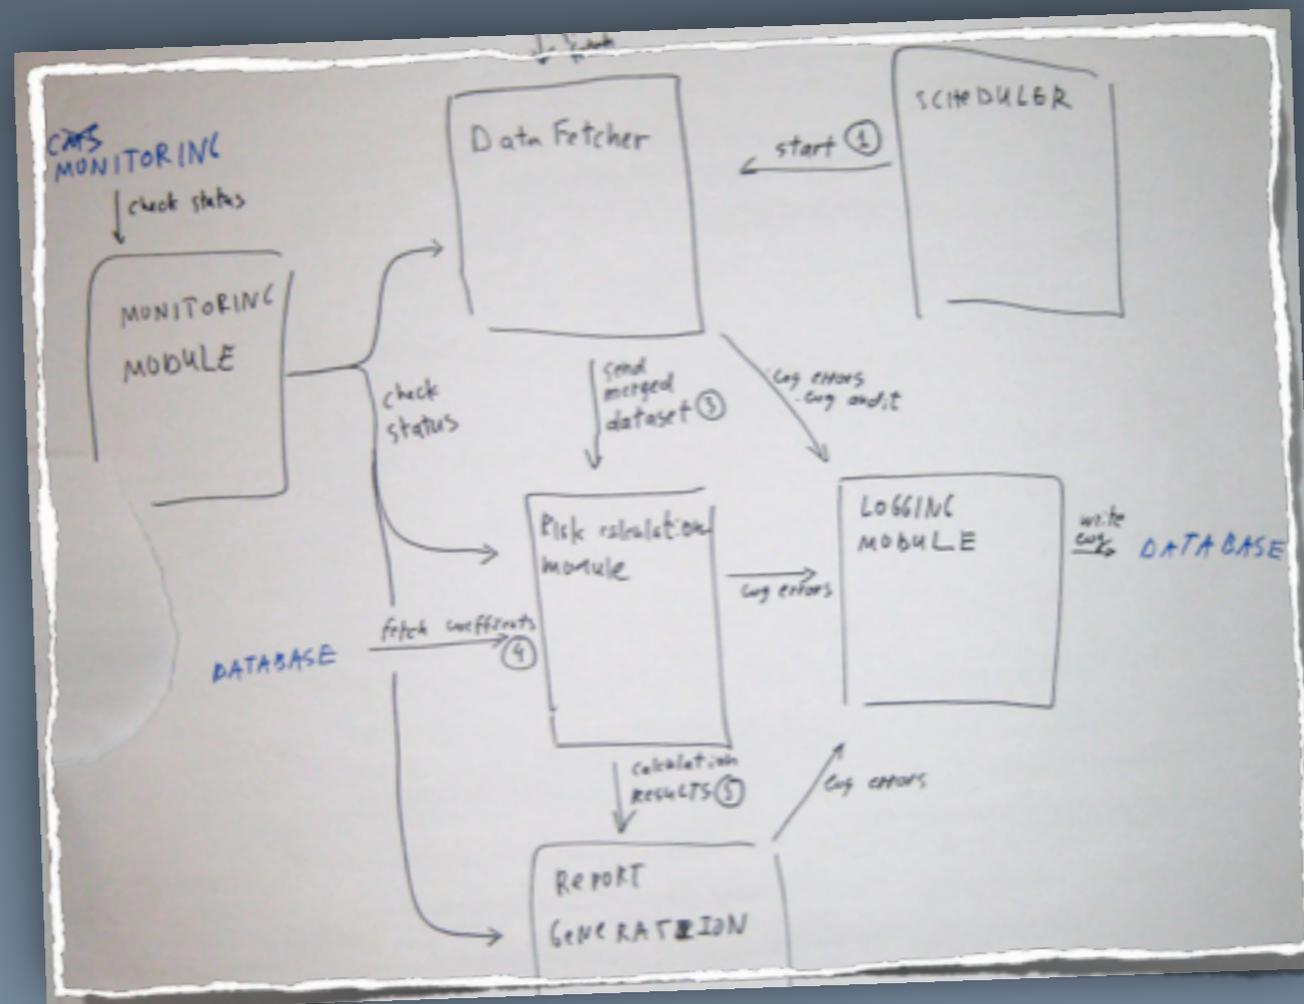

Leave your
sketches
on the wall

Sketches are maps that help a team navigate a complex codebase

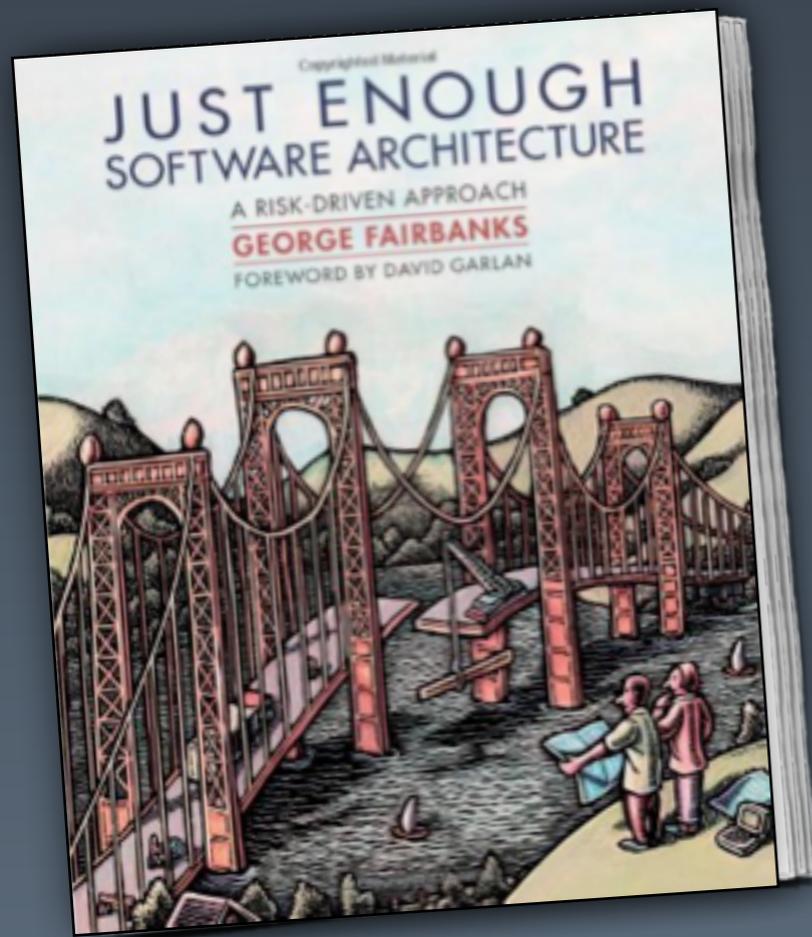

Abstraction

is about reducing detail rather than creating a different representation

Does your code reflect the
abstractions
that you think about?

We often **think**
in **components**
but **write classes**

Just Enough Software Architecture

A Risk-Driven Approach

George Fairbanks

“the model-code gap”
and an
“architecturally-evident
coding style”

(subclassing, naming conventions, module dependencies, package structure, ...)

A component is often a combination of a number of classes in different layers.

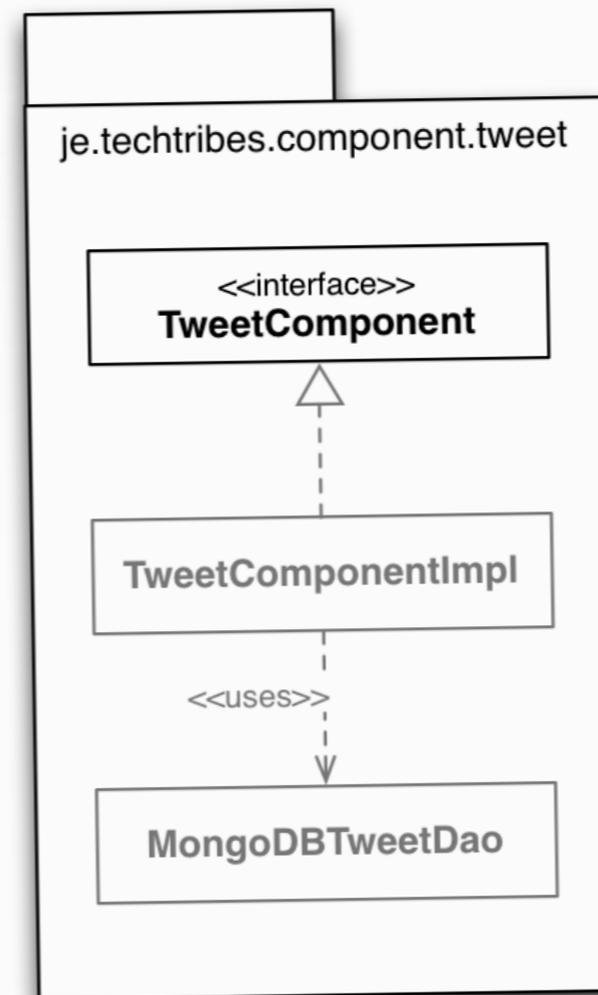

Package by layer

What's a "component"?

Package by layer

A component is often a combination of a number of classes in different layers.

Package by component

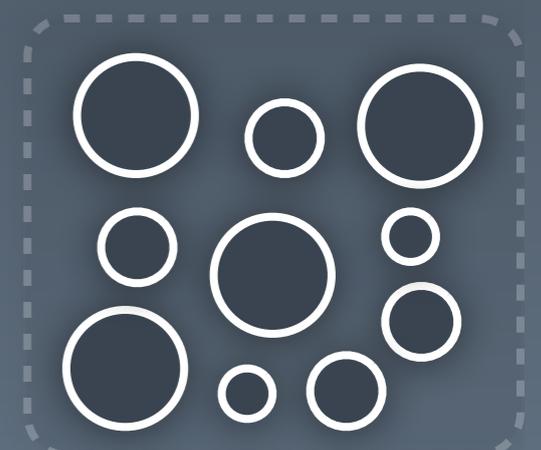

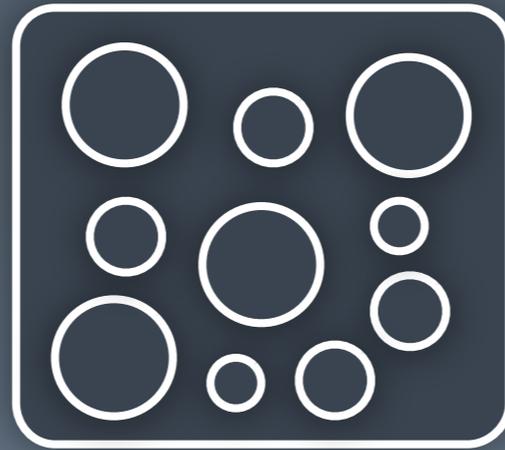

What's a "component"?

Diagramming tools see
packages and classes not
components and services

A good
architecture
enables
agility

Monolithic
architecture

Service-based
architecture
(SOA, micro-services, etc)

Something in between
(components)

Structure

Understand the significant structural elements and how they fit together, based upon the architectural drivers.

Design and decomposition down to containers and components.

Risks

Identify and mitigate the highest priority risks.

Risk-storming and concrete experiments.

Vision

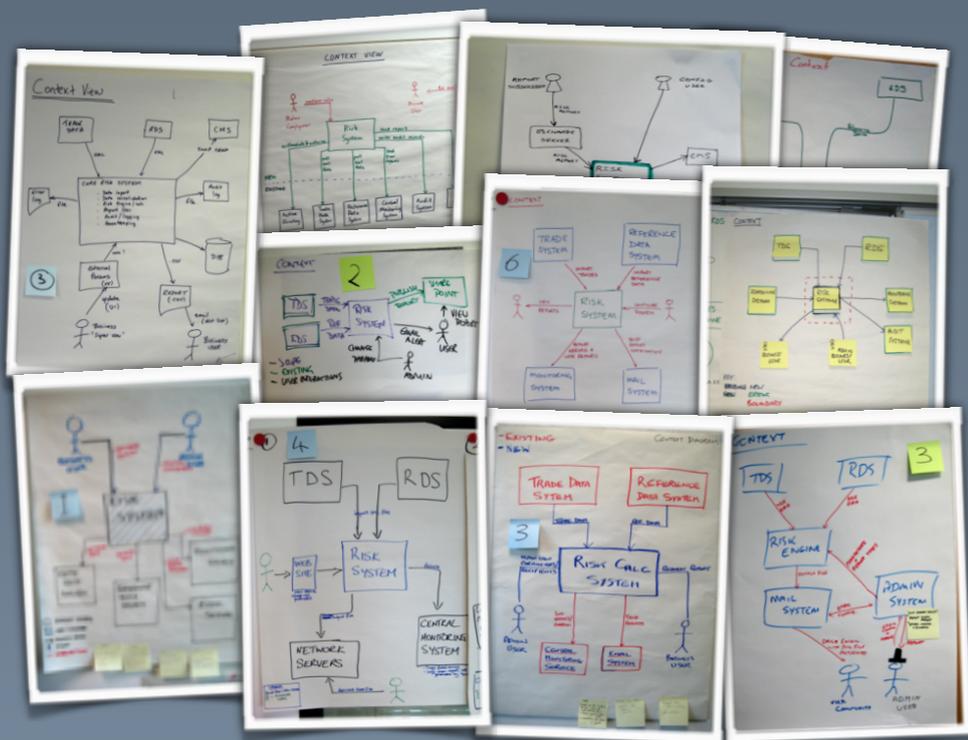

Create and communicate a vision for the team to work with.

Context, container and component diagrams.

Just enough up front design
to create **firm foundations**
for the software **product** and its **delivery**

Thanks

and happy sketching!
