Hands-on software
architect

coding
the
architecture

T

is for technology

As developers, we tend to have very

deep technical knowledge

We understand

programming
language syntax

We understand

APIs and
frameworks

We understand
design patterns

We understand
**automated unit
testing**

But we typically use a
single
technology on a day-to-day basis

[Microsoft | Java | Open Source]

And we typically stick to what we
know

And therefore,
every problem
can be solved with that technology

[Microsoft | Java | Open Source]
